

# General advice for an off-normal event:

1. **Think!**
2. Respond if you think you understand what the problem is and what the proper response is.
3. You can almost always control the tgt manually with the manual heater, or the JTs, to keep it safe.
4. Reboot (rebooting solves many problems).
5. Call an expert unless you are 100% positive the problem has been dealt with successfully. For all but routine alarms, call expert anyway.
6. **Log the problem.**
