Lab Visitors

Dr. Han Elsayed Ali, ODU-ARC Director brought his new staff member, Dr. Takuya Suzuki, from Japan for a tour of the William and Mary labs.

Dr. Peter De Wolf from Veeco stopped by the labs to make sure our Atomic Force Microscope (AFM) was working properly.

The Colonial Williamsburg Foundation sent researchers, Chris Swan, Helen Statum, Jossiah Wagener, Ikuko Tekeyama, and Carl West to the labs for training in the use of the FTIR.

Hirox Visitors

Steve Buck and Nathan Ilnicki, from HiROX, stopped by the lab to introduce the group to the new microscope controller. Steve and Nathan are shown here with Amy, demonstrating how the new Hirox differs from our older controller. One thing it has is a bigger hard drive. It also features new software that includes a photo editing system.

Steve Buck shows Amy and the Arc group how the new Hirox software and unit is more user friendly and how it works better than its predecessor. The new system allows the user to work with photo cropping and it also allows the user to save the photo on to a hard drive without a problem.
