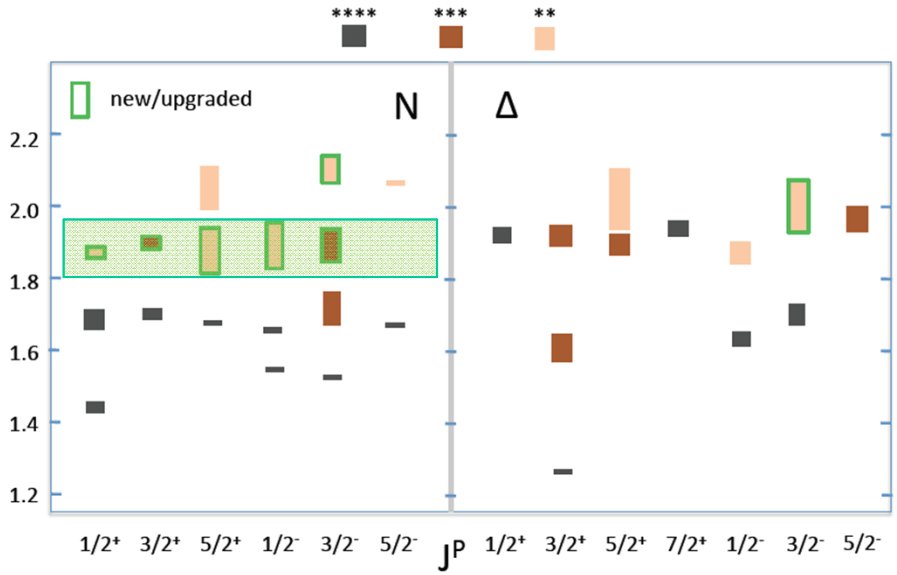
High-statistics and high-precision photoproduction data from JLAB, MAMI, ELSA, GRAAL

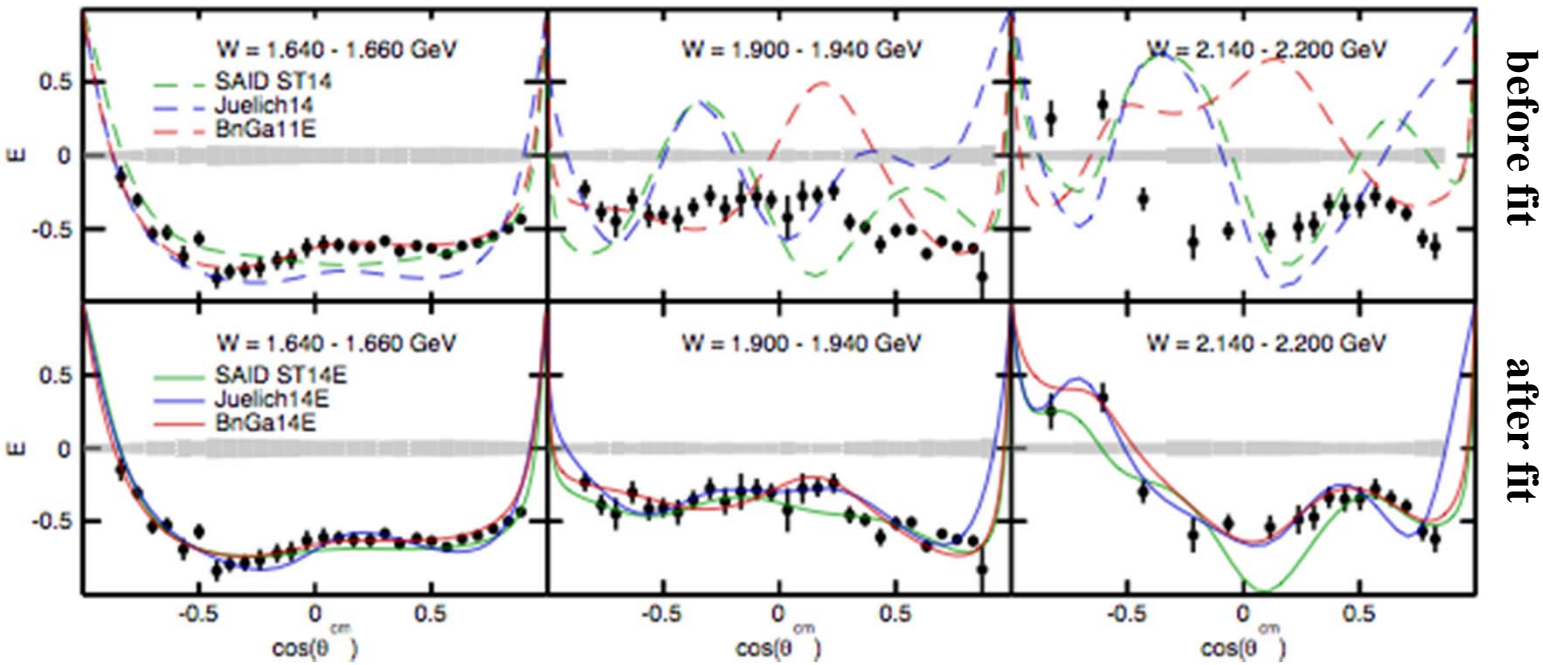


Are we observing parity doublets with the new states or not?

V. Crede & W. Roberts, Rep. Prog. Phys. 76 (2013)

New FROST Results from $\vec{\gamma}\vec{p} \rightarrow \pi^0 p$

W = 1.650 GeV **W = 1.920 GeV** **W = 2.170 GeV**

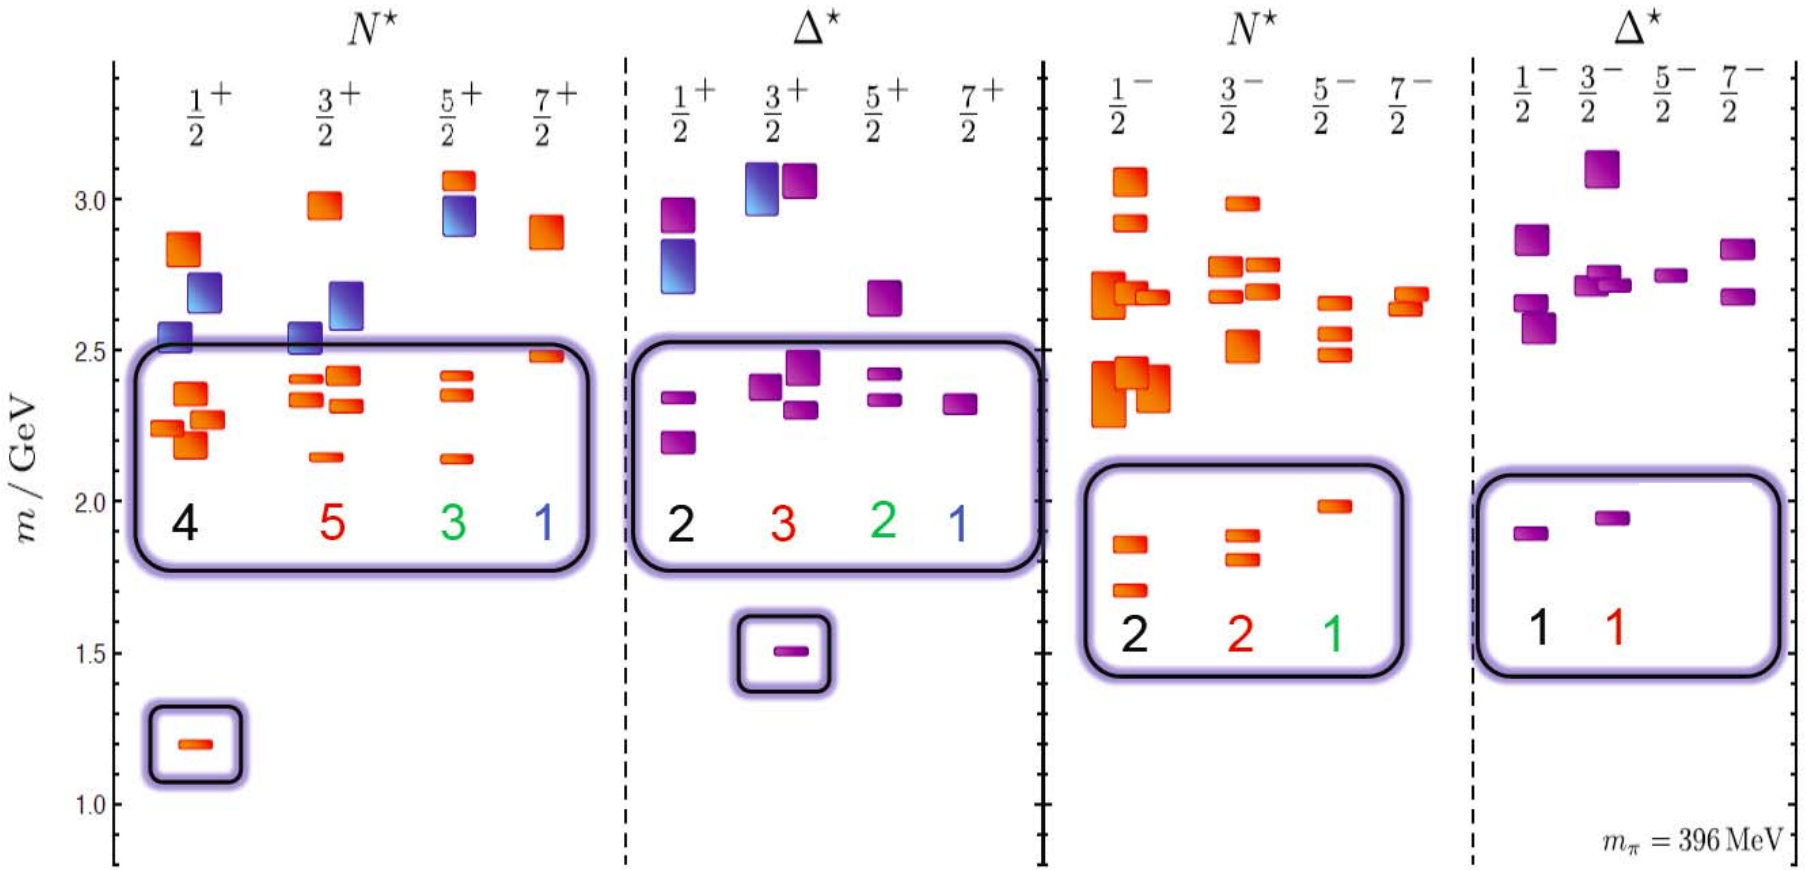


- FROST experiment produced 900 data points of the **double-polarization observable E** in π^+ photoproduction with circularly polarized beam on longitudinally polarized protons for W = 1240 - 2260 MeV.
- Significant improvements of the description of the data in SAID, Jülich, and BnGa partial-wave analyses after fitting.
- New strong evidence found in this data for a $\Delta(2200)7/2^-$ resonance (BnGa analysis).

S. Strauch *et al.*, arXiv:1503.05163 and A.V. Anisovich *et al.*, arXiv:1503.05774

N* Spectrum in LQCD

The strong interaction physics is encoded in the nucleon excitation spectrum that spans the degrees of freedom from meson-baryon and dressed quarks to elementary quarks and gluons.

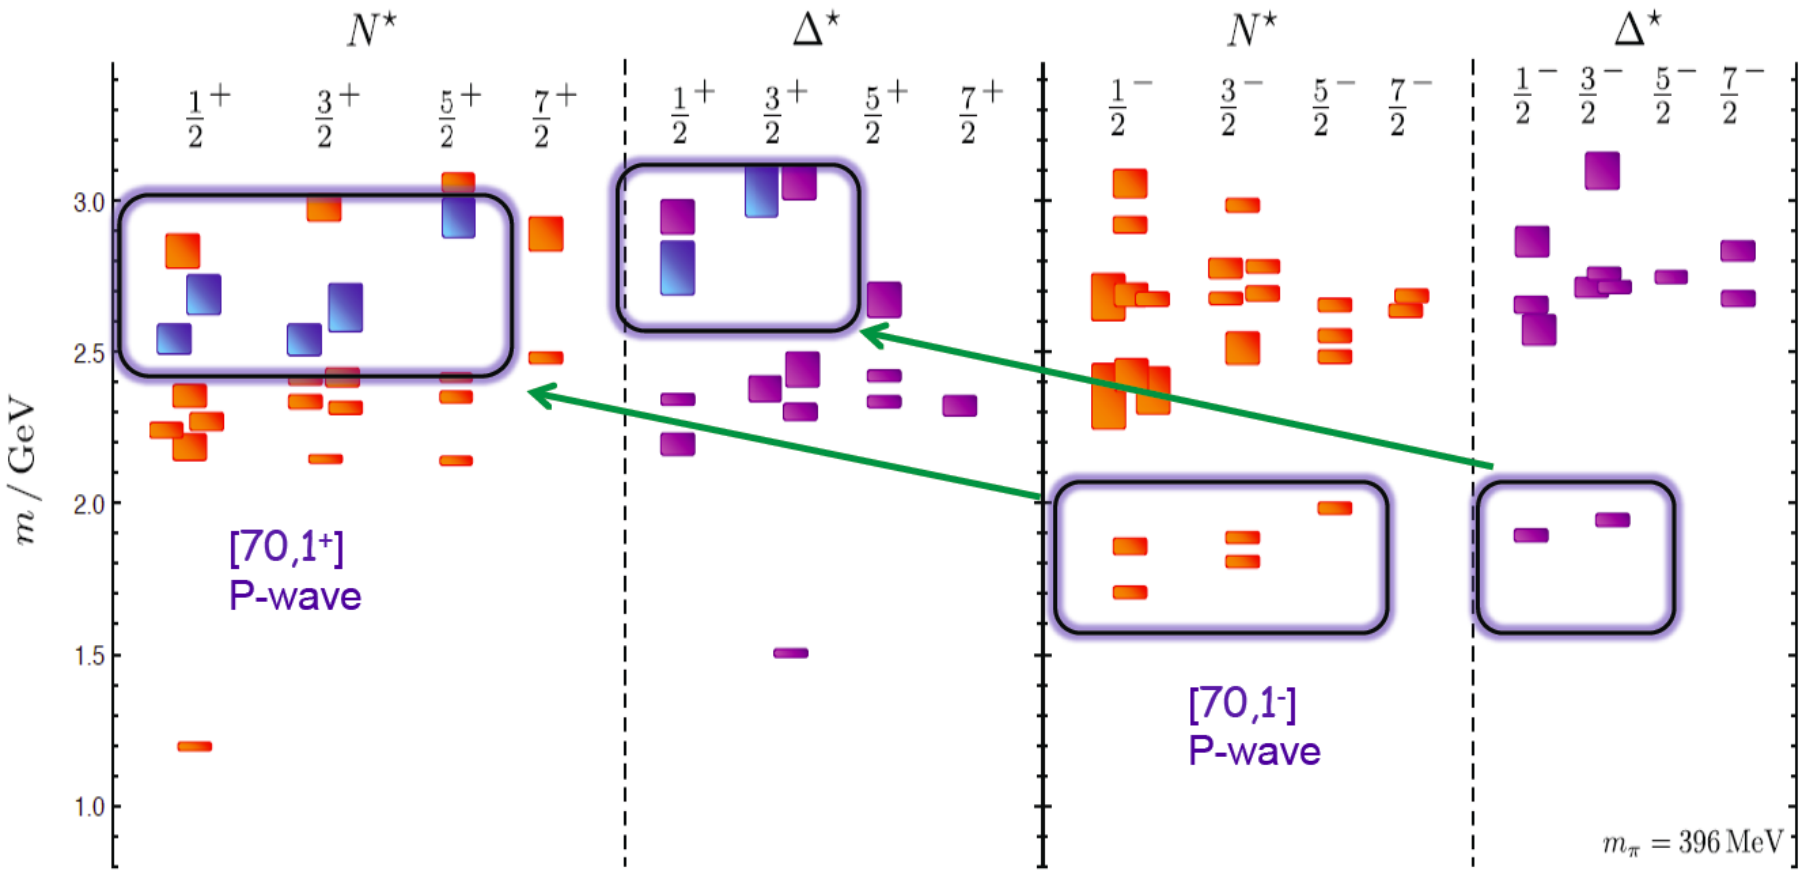


LQCD predicts states with the same quantum numbers as CQMs with underlying SU(6)xO(3) symmetry.

R. Edwards et al. arXiv:1104.5152, 1201.2349

N* Spectrum in LQCD

The strong interaction physics is encoded in the nucleon excitation spectrum that spans the degrees of freedom from meson-baryon and dressed quarks to elementary quarks and gluons.



LQCD predicts hybrid baryon states replicating the negative parity multiplet structure.

R. Edwards et al.

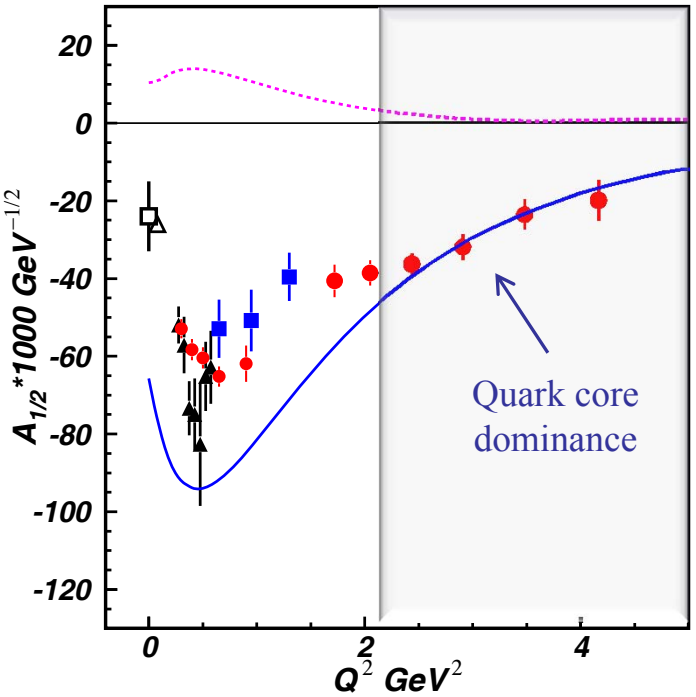
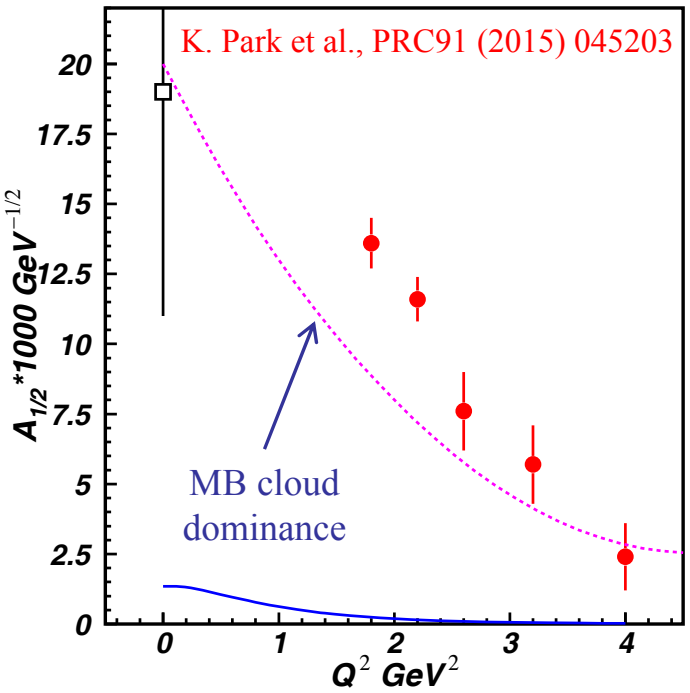
Interplay between Meson-Baryon Cloud and Quark Core

N(1520)3/2$^-$



N(1675)5/2$^-$



..... Argonne-Osaka MB dressing (absolute values)

——— E. Santopinto and M. Giannini, PRC 86 (2012) 065202

The almost direct access to
- quark core from the data on N(1520)3/2$^-$
- meson-baryon cloud from the data on N(1675)5/2$^-$

sheds light on the transition from the confined quark to the colorless meson-baryon structure and its dependents on the N* quantum numbers.

Higher-Lying Resonance Electrocouplings

Independent fits in different W-intervals

green: 1.46<W<1.56 GeV
magenta: 1.56<W<1.66 GeV
red: 1.61<W<1.71 GeV
blue: 1.66<W<1.76 GeV
black: 1.71<W<1.81 GeV

result in consistent electrocouplings and hence offer sound evidence for their reliable extraction.

The $\pi^+\pi^-$p electroproduction channel provides first preliminary results on the $\Delta(1620)1/2^-$, $N(1650)1/2^-$, $N(1680)5/2^+$, $\Delta(1700)3/2^-$, and $N(1720)3/2^+$ electrocouplings with good accuracy.

Submitted for publication.

New N'(1720)3/2$^+$ State and its Properties

N* hadronic decays from JM15 that incorporates N'(1720)3/2$^+$

Resonance	BF(πΔ), %	BF(ρp), %
N'(1720)3/2$^+$		
electroproduction	**47-64**	**3-10**
photoproduction	**46-62**	**4-13**
N(1720)3/2$^+$		
electroproduction	**39-55**	**23-49**
photoproduction	**38-53**	**31-46**
Δ(1700)3/2$^-$		
electroproduction	**77-95**	**3-5**
photoproduction	**78-93**	**3-6**

A successful description of $\pi^+\pi^-p$ photo- and electro-production cross sections at Q^2=0, 0.65, 0.95, and 1.30 GeV^2 has been achieved by implementing a new N'(1720)3/2$^+$ state with Q^2-independent hadronic decay widths of all resonances that contribute at W~1.7 GeV, that allows us to claim the existence of a new N'(1720)3/2$^+$ state.

Mass: 1.715-1.735 GeV
Width: 120 6 MeV
N'(1720)3/2$^+$

Mass: 1.743-1.753 GeV

FSI for $\gamma n \to \pi^- p$

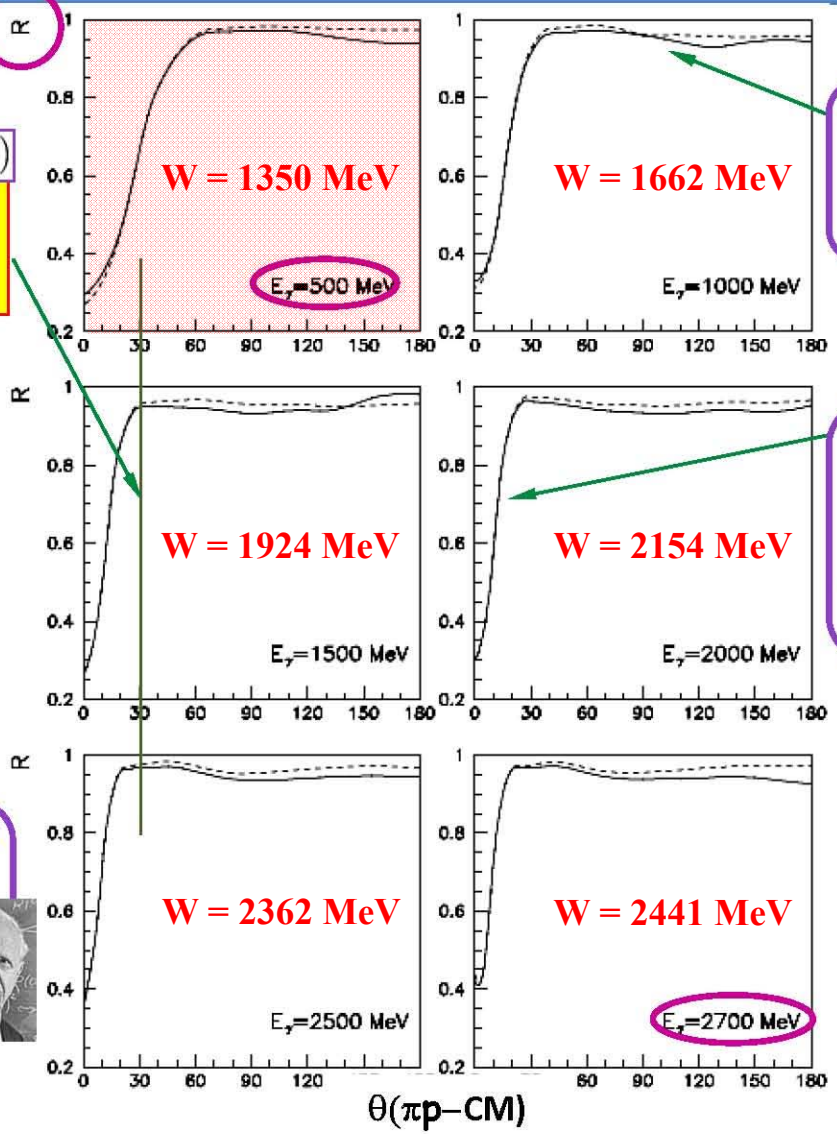
[V. Tarasov, A. Kudryavtsev, W. Briscoe, H. Gao, IS, Phys Rev C 84, 035203 (2011)]

$$R_{FSI} = (d\sigma/d\Omega_{\pi p})/(d\sigma^{IA}/d\Omega_{\pi p})$$

Cuts:
p_s > 200 MeV/c
p_f > 200 MeV/c

CLAS data:
E > 1 GeV
θ > 32 deg

- There is no large sensitivity to cuts.



- For CLAS data
  - The FSI correction factor R < 1.
  - The behavior is smooth vs. θ.
  - The effect $\Delta\sigma/\sigma \leq 10\%$.

- There is a **sizeable** FSI effect from **S-wave** part of **pp-FSI** at small angles.
- This region **narrows** as the E_γ increases.

- Our estimation of the **Glauber FSI** corrections gives the value of 5%.
- **Previous** estimations gave the order of 15-30%.

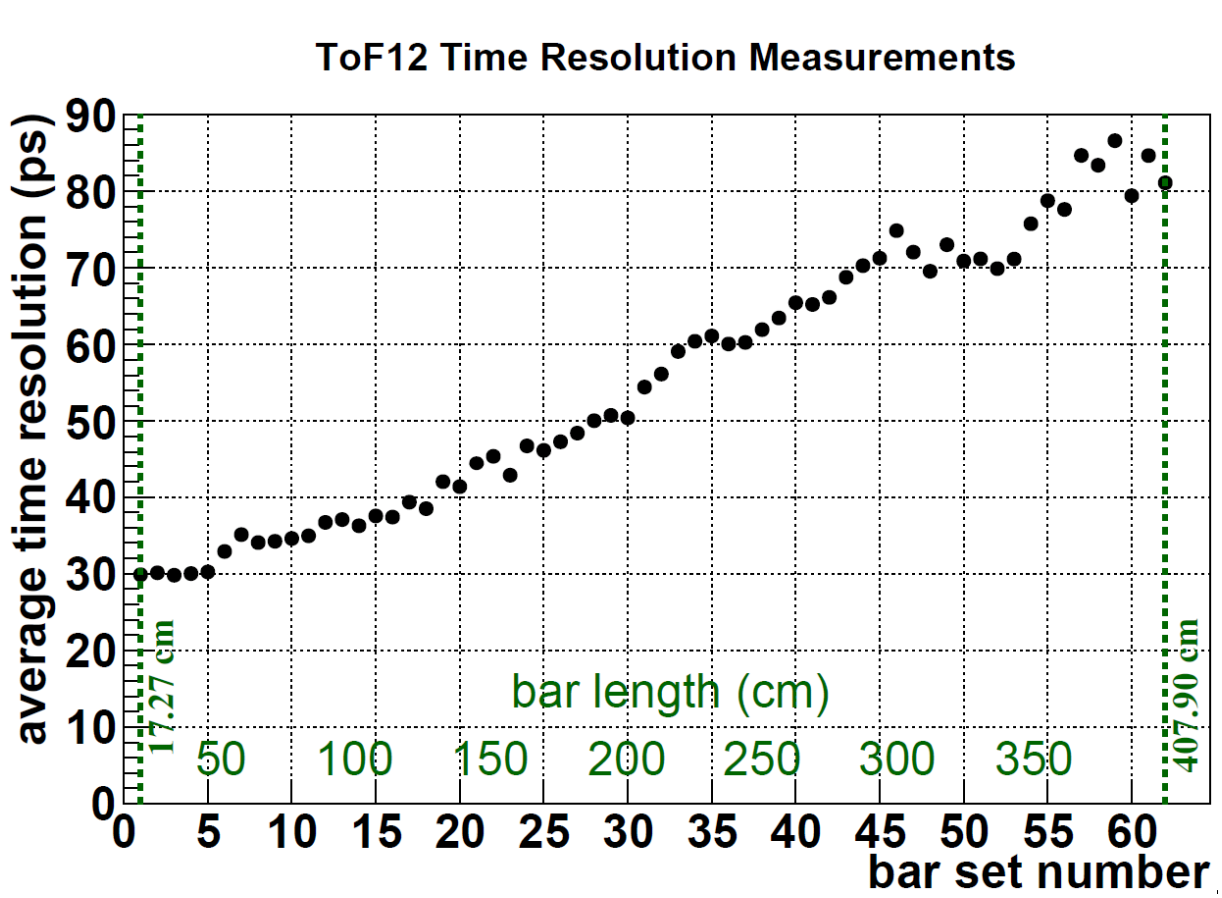
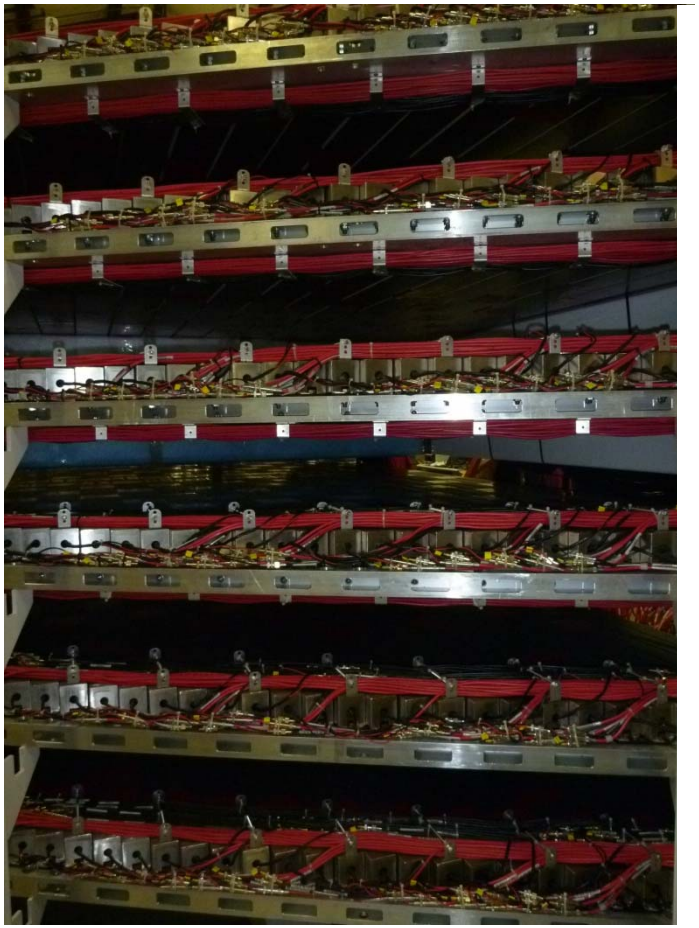
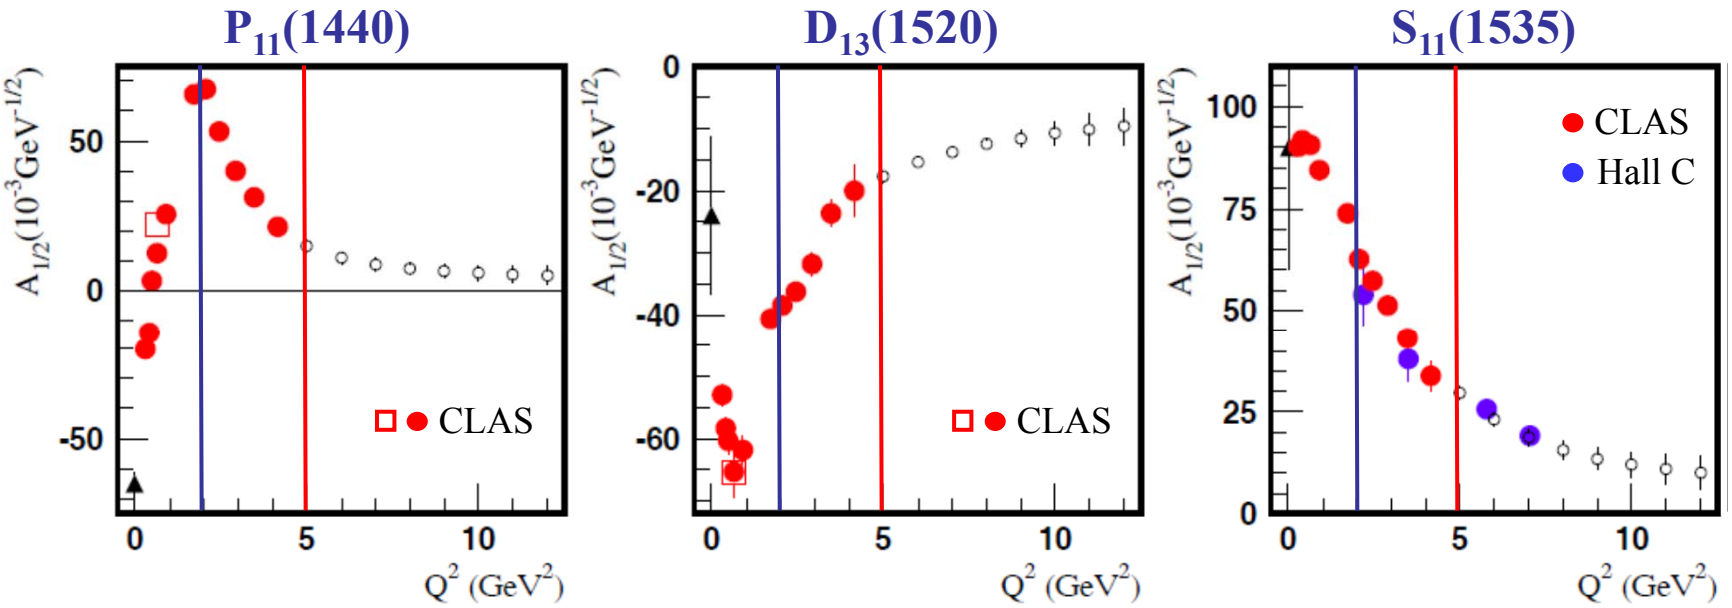
New Forward Time of Flight Detector for CLAS12





Anticipated N* Electrocouplings from Combined Analyses of Nπ/Nππ

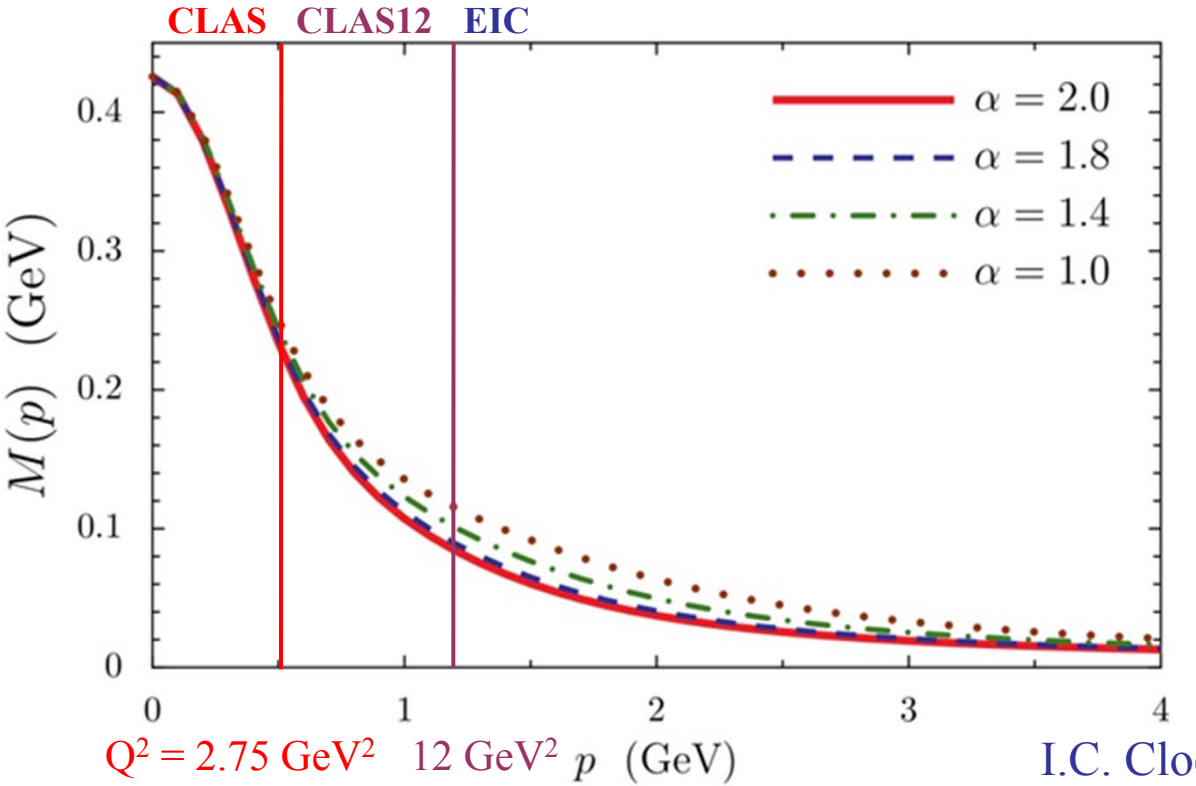


Open circles represent projections and all other markers the available results with the 6-GeV electron beam

- Examples of published and projected results obtained within 60d for three prominent excited proton states from analyses of Nπ and Nππ electroproduction channels. Similar results are expected for many other resonances at higher masses, e.g. $S_{11}(1650)$, $F_{15}(1685)$, $D_{33}(1700)$, $P_{13}(1720)$, …
- The approved CLAS12 experiments E12-09-003 (NM, Nππ) and E12-06-108A (KY) are currently the only experiments that can provide data on γ_vNN* electrocouplings for almost all well established excited proton states at the highest photon virtualities ever achieved in N* studies up to Q^2 of 12 GeV^2, see http://boson.physics.sc.edu/~gothe/research/pub/whitepaper-9-14.pdf.

Dyson-Schwinger Equation (DSE) Approach

DSE approaches provide links between dressed quark propagators, form factors, scattering amplitudes, and QCD.



N* electrocouplings can be determined by applying Bethe-Salpeter / Faddeev equations to 3 dressed quarks while the properties and interactions are derived from QCD.

Impact of a modified momentum dependence of the dressed-quark propagator.

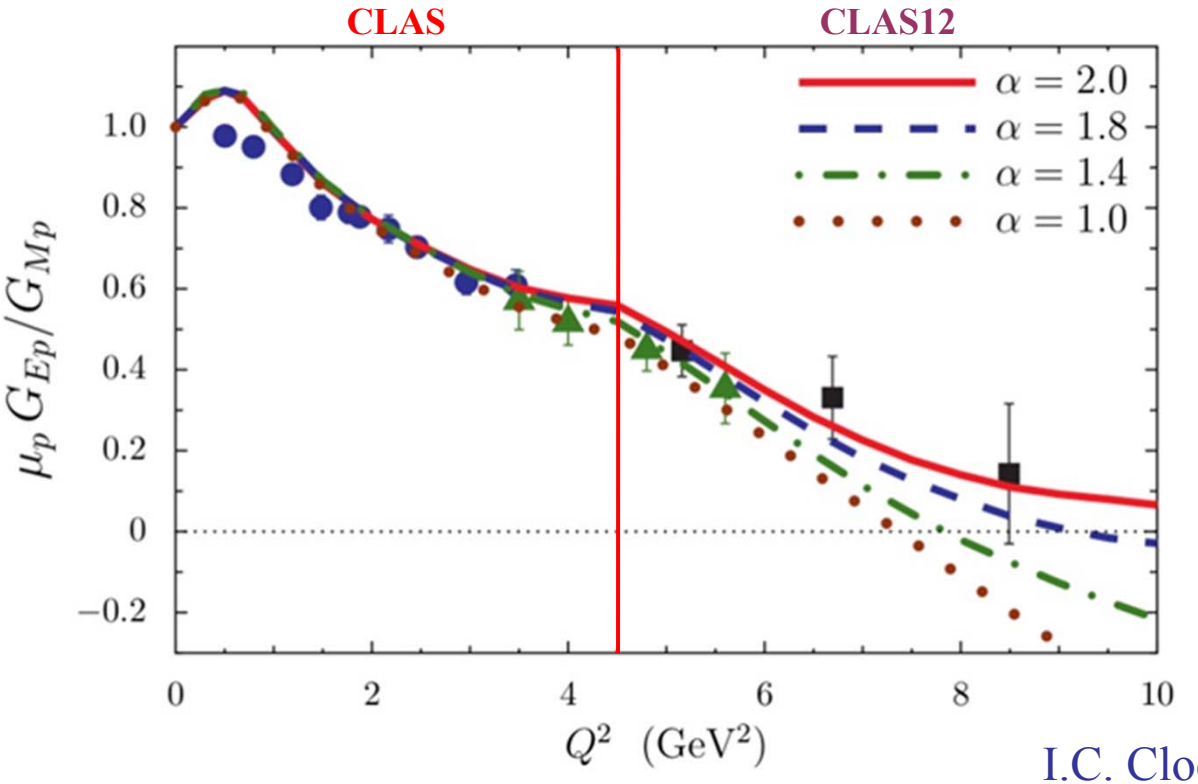
I.C. Cloet et al., arXiv:1304.0855[nucl-th]

DSE electrocouplings of several excited nucleon states will become available as part of the commitment of the Argonne NL.

Int. J. Mod. Phys. E, Vol. 22, 1330015 (2013) 1-99

Dyson-Schwinger Equation (DSE) Approach

DSE approaches provide links between dressed quark propagators, form factors, scattering amplitudes, and QCD.



N* electrocouplings can be determined by applying Bethe-Salpeter / Faddeev equations to 3 dressed quarks while the properties and interactions are derived from QCD.

DSE calculations of elastic and transition form factors are very sensitive to the momentum dependence of the dressed-quark propagator.

I.C. Cloet et al., arXiv:1304.0855[nucl-th]

DSE electrocouplings of several excited nucleon states will become available as part of the commitment of the Argonne NL.

Int. J. Mod. Phys. E, Vol. 22, 1330015 (2013) 1-99

Summary

- First high precision photo- and electroproduction data have become available and led to a new wave of significant developments in reaction and QCD-based theories.
- New high precision hadro-, photo-, and electroproduction data off the proton and the neutron will stabilize coupled channel analyses and expand the validity of reaction models, allowing us to
  - investigate and search for baryon hybrids,
  - establish a repertoire of high precision spectroscopy parameters, and
  - measure light-quark-flavor separated electrocouplings over an extended Q^2-range, both to lower and higher Q^2, for a wide variety of N* states.
- Comparing these results with DSE, LQCD, LCSR, and rCQM will build insights into
  - the strong interaction of dressed quarks and their confinement,
  - the emergence of bare quark dressing and dressed quark interactions from QCD, and
  - the QCD β-function and the origin of 98% of nucleon mass.
- A tight collaboration of experimentalists and theorists has formed and is needed to push these goals, see Review Article Int. J. Mod. Phys. E, Vol. 22, 1330015 (2013) 1-99, that shall lead to a QCD theory that describes the strong interaction from current quarks to nuclei. **ECT*2015 and INT2016.**
