

# Glassman –100kV Supply

The Glassman –100kV supply is at the top rack IN01B02. It's face is beige, and there are two meters on the front, one for milliamperes and one for kilovolts. There are jumper settings in the back, as well as the connection points for the high voltage cables. The Glassman has no serviceable parts inside. Because of this a spare Glassman supply is kept in the same rack underneath the high voltage interface chassis.
