# Contents

**1 EXECUTIVE SUMMARY** **1**

1.A Physics Overview . . . . . 2

1.A.1 The Origin and Nature of Quark Confinement: Discovering and Studying the Exotic Mesons . . . . . 3

1.A.2 The Quark-Gluon Wavefunctions of the Nuclear Building Blocks . . . . . 6

1.A.3 Other New Research Thrusts in the Major CEBAF Campaigns . . . . . 16

1.B Upgrade Project Summary . . . . . 23

**2 THE PHYSICS DRIVING THE UPGRADE OF CEBAF TO 12 GeV** **27**

2.A Campaign 1: Testing the Origin of Quark Confinement . . . . . 27

2.A.1 Spectroscopy of Gluonic Excitations . . . . . 29

Flux tubes . . . . . 29

Conventional mesons . . . . . 30

Mesons and gluonic excitations . . . . . 32

Focusing on light-quark exotic hybrids . . . . . 32

Observation of gluonic excitations . . . . . 34

2.A.2 Photoproduction of Gluonic Excitations . . . . . 35

2.A.3 Partial Wave Analysis and Photon Polarization . . . . . 36

Kinematics . . . . . 36

Partial wave analysis goals . . . . . 37

Linear and circular polarization . . . . . 38

Linear polarization and statistics . . . . . 40
Linear polarization and the production mechanism . . . . . 40
Linear polarization as an exotics filter . . . . . 40
2.A.4 The Optimal Photon and Electron Energies . . . . . 41
2.A.5 External Review of the Hall D Project . . . . . 44
Review report summary . . . . . 44
2.A.6 The Spectroscopy of $s\bar{s}$ Mesons . . . . . 47
2.B Campaign 2: How are the Nuclear Building Blocks Made from Quarks and Gluons? 49
2.B.1 Valence Quark Momentum Distributions . . . . . 50
Theoretical predictions for large-$x_{Bj}$ distributions . . . . . 53
The ratio $R^{np} = F_2^n/F_2^p$ of the neutron and proton structure functions . . . . 55
The neutron spin structure function $A_1^n$ . . . . . 56
Higher-twist effects and the $g_2^n$ structure function . . . . . 57
2.B.2 Deep Exclusive Scattering (DES) Cross Sections and Generalized Parton Distributions . . . . . 61
Deeply virtual Compton scattering . . . . . 66
Hard meson electroproduction . . . . . 68
2.B.3 Form Factors . . . . . 76
Nucleon elastic and transition form factors . . . . . 76
The pion form factor . . . . . 80
Primakoff photo- and electro-production . . . . . 82
2.B.4 Low-Energy Quark-Hadron Duality . . . . . 85

Recent results . . . 88

Duality in unpolarized structure functions . . . 90

Evolution of the parton distribution functions at large $x_{Bj}$ . . . 90

Duality in spin-structure functions . . . 91

Duality and pions at high transverse momenta . . . 91

Fragmentation duality . . . 92

2.B.5 Low-Energy Fragmentation Functions . . . 93

2.C Campaign 3: Understanding the Origin of the $NN$ Force . . . 97

2.C.1 $J/\psi$ Photoproduction near Threshold . . . 98

2.C.2 Color Transparency . . . 103

Color transparency in $(e, e'N)$ and $(e, e'NN)$ reactions . . . 104

Color transparency effects in coherent vector-meson production from the deuteron . . . 107

2.D Campaigns 4 & 5: Testing the Limits of the Meson/Nucleon Description of Nuclei and Probing the Limits of the "Standard Model" of Nuclear Physics . . . 110

2.D.1 Probing the Limits of the Standard Model of Nuclear Physics: Few-Body Form Factors . . . 111

2.D.2 Probing the Limits of the Standard Model of Nuclear Physics: Short-Range Correlations in Nuclei . . . 116

2.D.3 Testing the Limits of Nuclear Many-Body Physics: Probing Non-Nucleonic Degrees of Freedom in Nuclei . . . 118

**3 THE ACCELERATOR UPGRADE** **125**

3.A Overview . . . 125

3.B Highlights of the Changes to the Accelerator . . . 126
3.B.1 Acceleration . . . 126
3.B.2 Beam Transport . . . 128
3.C CEBAF Today: A Status Report . . . 131
3.D Details of the 12 GeV Upgrade of the CEBAF Accelerator . . . 133
3.D.1 Accelerating Structures . . . 133
Cavities . . . 135
Cryomodule design . . . 136
Cryomodule components and design choices . . . 137
3.D.2 RF Power and Control . . . 142
3.D.3 Optics and Beam Transport . . . 145
3.D.4 Magnet Power Supplies . . . 153
3.D.5 Instrumentation and Control . . . 157
3.D.6 Cryogenics . . . 158
3.D.7 Civil Construction . . . 161
3.D.8 Schedule . . . 162

**4 EXPERIMENTAL EQUIPMENT FOR THE 12 GeV UPGRADE 165**

4.A Overview . . . 165
4.B Hall A . . . 166
4.B.1 Overview . . . 166
4.B.2 A New, Medium-Acceptance Device (MAD) . . . 168

General characteristics . . . 168
Optical design . . . 169
Magnet design . . . 171
The detector system . . . 178
4.B.3 High-performance electromagnetic calorimetry . . . 180
4.B.4 A $^3$H Target . . . 181
4.C Hall B . . . 184
4.C.1 Overview . . . 184
4.C.2 Present CLAS Spectrometer . . . 185
4.C.3 CLAS Performance . . . 186
Angular coverage . . . 187
Particle identification . . . 187
Missing-mass technique . . . 189
4.C.4 Physics Program for an Upgraded CLAS . . . 191
4.C.5 Design Goals for Higher Energy . . . 192
4.C.6 CLAS Upgrade Plan . . . 193
Central detector . . . 193
Forward tracker . . . 196
GAP detectors . . . 197
Particle identification strategy . . . 197
Trigger and data acquisition . . . 198
Bremsstrahlung tagging system . . . 199

4.C.7 Hall B Summary . . . 201
4.D Hall C . . . 204
4.D.1 Overview . . . 204
Measurements of the charged pion form factor at large $Q^2$ . . . 205
Color transparency . . . 205
$N \to N^*$ form factors at high $Q^2$ . . . 206
Duality and fragmentation . . . 207
4.D.2 SHMS Optical Design . . . 208
4.D.3 Magnet Engineering . . . 212
4.D.4 Detectors . . . 216
Tracking and basic trigger . . . 218
Particle identification . . . 218
4.E Hall D . . . 221
4.E.1 Introduction . . . 221
4.E.2 The Photon Beam and Polarization . . . 221
The photon tagger and beam collimation . . . 222
Polarization via coherent bremsstrahlung . . . 224
4.E.3 The Hall D Detector . . . 226
The superconducting solenoid . . . 227
Particle tracking and particle identification . . . 227
4.E.4 Rates, Trigger, and Data Acquisition . . . 233
4.E.5 Data Handling . . . 235

4.E.6 Partial Wave Analysis . . . . . 236

4.E.7 Hall D Summary . . . . . 240
