List of Figures

1 QCD predicts a confining flux tube is formed between distant static charges. 3

2 Evidence for flux tubes and linear potentials from lattice QCD. 4

3 Model-independent spectrum of the glue (flux tube) of Fig. 1. 5

4 The results of a double-blind Monte Carlo simulation of the GlueX experiment. . . . 7

5 The relative splittings of the $Q\bar{d}$ states and the $Q\bar{Q}$ states, both shown from the heaviest to the lightest. 7

6 A model of the Generalized Parton Distribution (GPD) $H(x, \xi, t = 0)$ in two dimensions. 10

7 Representations of the proton properties probed in elastic scattering, deeply inelastic scattering, and deeply exclusive scattering. 11

8 The result of the JLab measurement of G_E^p/G_M^p and the range of the projected measurements, both compared to a variety of theories. 12

9 A projected measurement of the neutron polarization asymmetry A_1^n, determined by the spin structure of the valence quarks, made possible by the proposed 12 GeV Upgrade. 14

10 The ratio of polarized to unpolarized valence down quark distribution functions measured in semi-inclusive deep inelastic scattering 14

11 A projected measurement of the ratio of momentum distributions of valence d quarks to u quarks made possible by the proposed 12 GeV Upgrade 14

12 The "handbag" diagrams for deeply virtual Compton scattering and deeply virtual meson production. 16

13 Projected data for the DVCS beam spin asymmetry from JLab at 11 GeV 17

14 The quark spatial and spin distributions in the transverse plane from model calculations. 18

15 Phase diagram for nuclear matter. 24

16 Available data projected results for a differential cross-section measurement of deuteron photodisintegration. 26

17 Projected measurements of the pion elastic form factor 29

18 Projected measurements of the charged pion photoproduction cross section at a C.M. angle of 90° 29

19 Relative shifts in $Q^e_{\rm weak}$ and $Q^{\rm proton}_{\rm weak}$ from SUSY effects 30

20 The importance of $\Gamma_{\eta\to\gamma\gamma}$ in the measurement of the quark mass ratio 31

21 The $\eta - \eta'$ mixing angle as determined by a previous Primakoff measurement, $\gamma - \gamma$ collisions, and the projected result with the Jefferson Laboratory 12 GeV Upgrade . 31

22 The configuration of the proposed 12 GeV CEBAF Upgrade. 34

23 Three-dimensional CAD drawing of the MAD spectrometer 36

24 Section view of the CLAS^{++} detector. 38

25 The SHMS-HMS spectrometer pair in two extreme configurations. 43

26 The proposed detector for the study of the photoproduction of mesons in the mass region around 2 GeV. 46

27 Level diagram for mesons and exotics 51

28 The $q\bar{q}$ spectrum 52

29 Field lines associated with forces. 54

30 Lattice calculation of energy density 54

31 3π mass distributions 56

32 Intensities distributions in the 3π system. 57

33 Intensity in the exotic wave. 57

34 Breit-Wigner fit results. 58

35 Production of Hybrid Mesons 59

36 Photoproduction cross sections 60

37 3π spectrum from SLAC data. 62

38 Photproduction of particles 64

39 | t | distributions. 64

40 Schematic diagrams of form factor reactions that can be expressed in terms of the GPD formalism 69

41 Form factor reactions that can be expressed in terms of the valence pQCD formalism 69

42 The GPD $H(x, b_\perp) = u(x, b_\perp)$ obtained from the GPD $H(x, 0; \Delta_\perp)$ 73

43 The π^+ form factor 74

44 The proton magnetic form factor 75

45 The status of the JLab measurement of G_E^p/G_M^p and the range of the projected measurements 76

46 The current status of the data for G_M^n, and the projections for the Hall B program with the 12 GeV upgrade 77

47 The neutron electric form factor G_E^n. 78

48 Kinematic coverage of the planned RCS experiments with the 12 GeV upgrade . . . 80

49 The recoil polarization observable K_{LL} measured in the recent real Compton scattering experiment with projected data for a proposed experiment 80

50 The statistical accuracy of $R_A^{\pi^0}(t)$ anticipated in the Hall B measurement of the exclusive π^0 electroproduction. 81

51 The Delta resonance transition form factor G_M^*, as compared to the dipole G_D . . . 82

52 The E_{1+}/M_{1+} (or - G_E^*/G_M^*) ratio for Delta excitation. 82

53 Existing JLab data for S_{1+}/M_{1+} and JLab Hall B 12 GeV projections. 82

54 The JLab data for the $p \to S_{11}$ helicity amplitude $Q^3 A_{1/2}$ 85

55 Ratio R^{np} of neutron to proton structure functions as a function of x, extracted from the SLAC data on the deep inelastic proton and deuteron structure functions. 87

56 Sample of large-x data for A_1^p and A_1^n 90

57 The ratio F_2^n/F_2^p versus x 92

58 Projected measurements for $R = \sigma_L/\sigma_T$ at $x = 0.8$ 94

59 Lowest moments $M_n^2(Q^2)$ of the proton–neutron F_2 structure function difference, for $n = 2$, 4, and 6, as a function of Q^2. 95

60 Projected errors for measurements of asymmetries A_1 in the large-x region made possible by the proposed 12 GeV Upgrade 97

61 Expected data with CLAS^{++} in Hall B for the polarization asymmetries of the proton and deuteron 99

62 Longitudinal beam-target polarization asymmetry of a proton versus W, for an 11 GeV measurement at $Q^2 = 8$ (GeV/c)^2 in Hall C. 100

63 Projected errors for $x^2 g_2(x)$ for the neutron and proton from 11 GeV JLab measurements 101

64 Neutron twist-3 matrix element d_2^n data and projected errors for a 12 GeV JLab measurement 101

65 Projected errors for the ratio of polarized to unpolarized quark distribution functions at a 12 GeV CEBAF, compared with HERMES data 103

66 The projected precision of $\bar{d}/\bar{u}$ extractions compared with the FNAL E866 Drell-Yan [Ha98] measurements. 105

67 Simulated data for the pion structure function at $Q^2 = 1.5$ and 3.0 (GeV/c)^2 105

68 Two dimensional image of $H(x, \xi, t)$ from a model with factorized t-dependence . . . 108

69 Model "tomographic" images of quarks in the transverse plane 110

70 Representative handbag diagrams for deeply virtual Compton scattering and deeply virtual meson production 112

71 Scaling cross sections for the production of photons (DVCS),pseudoscalar mesons, and vector mesons 113

72 Beam spin asymmetry measured with CLAS 114

73 Comparison of data on the Q^2 dependence of the $\gamma\gamma^*\pi^\circ$ form factor with two calculations 114

74 DVCS and Bethe-Heitler cross section for different beam energies 115

75 Kinematics coverage for deeply virtual exclusive processes for experiments at various laboratories 116

76 Kinematics for DVCS beam asymmetry measurements at 11 GeV 117

77 Projected data for the $\sin\phi$ moment $A_{LU}^{\sin\phi}$ of the DVCS/BH asymmetry 118

78 Projected Hall A data for the beam-helicity dependent cross section weighted by Bethe-Heitler denominator at $Q^2 = 7$ GeV^2 119

79 Projected results for the separation of $\sin\phi$ and $\sin(2\phi)$ terms in Fig. 78. 120

80 Projected data for longitudinal target asymmetry measured in CLAS^{++} 121

81 The handbag diagrams for DVCS and DDVCS 122

82 The handbag diagram for ΔDVCS 123

83 Inelastic DVCS as measured at 4.3 GeV 124

84 Asymmetry predicted for the ΔDVCS at 11 GeV. 124

85 World data for $R = \sigma_L/\sigma_T$ as a function of Q^2 126

86 Preliminary data from CLAS on the longitudinal cross section for ρ production at 4.3 GeV beam energy 127

87 Data from HERMES on longitudinal cross sections for ρ^0 production from protons at a beam energy of 27 GeV 128

88 Projected data on ρ^0 production from protons using CLAS^{++} 128

89 Projected data for a Rosenbluth separation of $ep \to en\pi^+$ in Hall C at $t = t_{min}$, $x_B = 0.55$. 129

90 Projected CLAS^{++} data for a Rosenbluth separation of $ep \to en\pi^+$ for $x_B = 0.45$, $-t = 0.5$ GeV^2. 129

91 Projected CLAS^{++} data on the transverse target asymmetry for ρ^0 production on protons 130

92 Interaction of struck quark and the target spectators[Br02]. 133

93 Representation of a GPD and a TMD in impact parameter space 133

94 Beam SSA: HERMES vs CLAS 135

95 Projected transverse spin asymmetry ($A_{UT}^{\sin\phi}$) in single π^+ production with CLAS at 12 GeV, and expected precision of the extracted $\delta u/u$ 136

96 Kinematic coverage at JLab at 12 GeV. 137

97 Target SSA 138

98 The $\Delta\epsilon$ range accessible at $x = 0.8$ in Hall C as a function of Q^2 141

99 The (x, Q^2) ranges available with the SHMS and HMS spectrometers for $\Delta\epsilon$ ranges above 0.3. 141

100 Phase diagram for hadronic matter. 149

101 Distribution of super-fast quarks for deuteron assuming just two nucleons or assuming a 5% contribution from a 6-quark bag 151

102 The scaling window for $\alpha = 1.4$. 152

103 The Q^2-dependence of nuclear transparency 154

104 Data from the Hall A $^3He(e, e'p)d$ experiment 155

105 Ratio $R = \sigma(p_m = 400\ MeV/c)/\sigma(p_m = 200\ MeV/c)$ for D(e,e′p) reaction 155

106 Projected uncertainties for a measurement of transparency in ρ-electroproduction in Hall B 156

107 Projected uncertainties for measurement of transparency in pion electroproduction in Hall C. 156

108 Projected uncertainties on the ratio of cross sections at transfered momenta 0.4 GeV/c^2 and 0.8 GeV/c^2 158

109 Variation of the cross sections of J/ψ elastic photoproduction near threshold, for two or three gluon exchange mechanisms 159

110 The simplest diagram to reveal hidden color state in deuterium 160

111 Artist's concept of the hadronization process in the valence quark regime 162

112 Schematic example of possible results for hadronization length scales 164

113 Schematic example of possible results for transverse momentum broadening 164

114 Statistical error per day of beam time as a function of beam energy for Q^2=6 (GeV/c)^2 at various recoil momenta 168

115 Statistical error per day of beam time for a beam energy of 11 GeV as a function of missing momenta for a variety of values of Q^2 . . . 168

116 ^{3}He$(e,e'pp)n$ measured with CLAS in one day at $E_0 = 4.4$ GeV . . . 169

117 Prediction of the onset of scaling for the ^{56}Fe$(e,e')X$ reaction. . . . 172

118 The π^+ form factor . . . 175

119 The charged pion photoproduction differential cross-section ratio at a C.M. angle of 90°, as a function of $|t|$ . . . 175

120 Projected data for the deuteron form factor $F_d(Q^2)$ with an 11 GeV beam. . . . 177

121 Projected data for the ^{3}He elastic form factor $F(Q^2)$ with an 11 GeV beam. . . . 177

122 High energy deuteron photodisintegration differential cross sections scaled by s^{11}. . . 179

123 Projected results for deuteron photodisintegration polarizations with MAD. . . . 179

124 The scaled differential cross-section for the $n(\gamma,\pi^- p)$ process at a C.M. angle of 90°, as a function of C.M. energy squared s in GeV^2 . . . 180

125 The scaled differential cross-section for the $p(\gamma,\pi^+)n$ process at C.M. angle of 90°, as a function of cms energy squared s in GeV^2 . . . 180

126 The scaled differential cross-section for the $p(\gamma,\pi^0)p$ process at C.M. angle of 90°, as a function of cms energy squared s in GeV^2 . . . 182

127 Estimated uncertainties for the induced polarization in $\vec{\gamma}p \to \vec{p}\pi^0$ for $E_\gamma = 6.9$ GeV, as a function of π^0 angle. . . . 182

128 The projected results for nuclear transparency for photo-pion production from a ^{12}C target . . . 183

129 The projected results for nuclear transparency for photo-pion production from a ^{4}He target . . . 183

130 Relative shifts in $Q^e_{\rm weak}$ and $Q^{\rm proton}_{\rm weak}$ from SUSY effects . . . 187

131 There has been a steady progression with time in the difficulty of Standard Models tests which employ parity violating electron scattering . . . 189

132 Schematic of a 12 GeV Møller experiment . . . 190

133 The limits on C_{2u} and C_{2d} . . . 193

134 The running of $\sin^2\theta_W$ in the $\overline{MS}$ scheme showing two measurements: e2ePV/Møller and DIS-Parity . . . 195

135 Symmetry breaking and quark mass effects for the light pseudoscalar mesons. . . . 196

136 The importance of $\Gamma_{\eta\to\gamma\gamma}$ in the measurement of $\mathcal{Q}$ . . . 200

137 Two-photon decay width for the η meson . . . 200

138 The $\eta-\eta'$ mixing angle as determined by a previous Primakoff measurement, $\gamma-\gamma$ collisions, and the projected result with the Jefferson Laboratory 12 GeV upgrade. 201

139 Differential cross sections (electromagnetic and nuclear) for the $\gamma+^4He\to\eta+^4He$ reaction at small angles at 10 GeV. . . . 202

140 The π^o transition form factor . . . 205

141 The η transition form factor . . . 206

142 Three-dimensional CAD drawing of Hall A showing the MAD Spectrometer with one of the present high resolution spectrometers . . . 211

143 The field vs. current for the MAD-1 and MAD-2 combined-function magnets . . . 215

144 A TOSCA plot of the magnitude of the magnetic field in the warm bore of the combined-function MAD magnet . . . 216

145 Exterior view of one of MAD's combined function magnets. . . . 216

146 Plot of the dipole component (B_y) and of the field gradient of the MAD-1 magnet along the centerline from the magnet center to 300 cm along the axis. . . . 217

147 The distribution of extreme trajectories in the MAD Spectrometer . . . 221

148 The MAD spectrometer's momentum resolution . . . 223

149 The MAD spectrometer's y_0 resolution . . . 223

150 The MAD spectrometer's θ resolution . . . 224

151 The MAD spectrometer's ϕ resolution . . . 224

152 Configuration of the detector package for electrons and hadrons . . . 228

153 Number of photo-electrons expected for high-energy electrons in the gas Čerenkov counter . . . 231

154 The deviation of velocity from 1 vs. momentum for protons, pions and kaons 233

155 Layout of the MAD focal plane polarimeter. 235

156 The upgraded CLAS^{++} detector. 241

157 CLAS^{++} Central detector region 244

158 Field distribution in the solenoid magnet and the flux return yoke 247

159 Perspective view of the central electromagnetic calorimeter inside the solenoid magnet. 248

160 Central calorimeter 249

161 Containment versus fraction of plastic. 250

162 Sampling errors versus fraction of plastic. 251

163 Perspective view of the central TOF system 252

164 Time differences between protons and pions, and between kaons and pions over the 25 cm path length expected for the outer TOF system. 252

165 Rates summed over all six sectors as a function of threshold at a luminosity of $0.9 \times 10^{34}\mathrm{cm}^{-2}\mathrm{s}^{-1}$ 253

166 Cathode chamber view of two superlayers. 254

167 Concept of a Silicon Strip Detector covering the angular range from 5^o to 135^o. . . . 255

168 Concept of the High Threshold Čerenkov Detector located inside the Torus coil arrangement. 259

169 Optics of the High Threshold Čerenkov Detector 260

170 Distribution of the number of photoelectrons N_{pe} for the HTCC in the $\phi - \theta$ plane and the average N_{pe} versus the polar angle 261

171 Time differences between protons and pions, and between kaons and pions over the 500 cm path length expected for the outer TOF system. 263

172 Previous measurements from two prototype tof detectors 264

173 Expected resolution for the existing tof detectors 264

174 Resolution for various scintillators showing the tradeoff between attenuation length and scintillator decay time. 265

175 Arrangement of the Inner Calorimeter covering the regions of the torus magnet coils 266

176 Distance between hit positions of the two photons from π^0 decay at the FEC plane as a function of the pion momentum 268

177 π^0 reconstruction efficiency from the reaction $ep \rightarrow ep\pi^o$ with beam energy of 11.5 GeV 269

178 3-d view of a corner of the pre-shower module 269

179 CLAS^{++} DAQ bloc diagram 273

180 Sketch of the High-Momentum Spectrometer 275

181 HMS Spectrometer Representative Data 276

182 Artist's Rendering of SHMS and HMS Spectrometers 278

183 SHMS Spectrometer Key Dimensions 279

184 Comparison of the Q1 gradients along Z at 7.1 T/m and 8.6 T/m. 280

185 Magnetic Fields in Q1 at High Current. 281

186 Cut-Away View of QD30 Magnet 281

187 Magnetic Field Magnitude in QD30 Midplane 283

188 QD30 Yoke Saturation 283

189 QD30 Dipole Field (B_y) 284

190 QD30 Quadrupole Field 284

191 SHMS Pivot with Slider. 287

192 Hall C Pivot with SOS, SHMS, and HMS Attached 287

193 The SHMS-HMS spectrometer pair in two extreme configurations. 288

194 Rays Tracked through the SHMS by COSY for the SSA Tune 293

195 Polynomial Coefficients in the QD Magnetic Field Model 294

196 Rays Tracked through the SHMS by COSY for the LSA Tune 296

197 The Phase Space Acceptance for the LSA and SSA Tunes 299

198 Particle Hit Density at $z = 0$ for Various Target Lengths 300

199 Particle Hit Density at Detector Locations for the LSA Tune 301

200 Resolutions at the Target vs. δ for the SSA Tune 302

201 Block Diagram of SHMS Detector Arrangement. 302

202 Measured Residual Distributions in the SOS Wire Chambers 304

203 Block diagram of the SHMS Wire Chamber Assembly 305

204 Pion/Kaon Discrimination from dE/dx 306

205 Time-of-Flight Relative to Electrons vs. Momentum 307

206 Placement of the Scintillator and Čerenkov Hodoscopes 308

207 Summary of the SHMS Particle Identification Resolving Power 310

208 Linearity and Resolution of a Lead Glass Calorimeter 312

209 Electron – Pion Discrimination Power of a Lead Glass Calorimeter 313

210 Pressure and Photoelectron Yield for the C_4F_{10} Čerenkov 315

211 Schematic Design for the SHMS Heavy Gas Čerenkov Detector. 315

212 Pion Efficiency of TRDs as a Function of the Detector Length 317

213 TRD Module and Output Signals 317

214 Hadron Velocity $1 - \beta$ as a Function of Momentum 319

215 SHMS Detector Package using the Focal Plane Polarimeter 320

216 A schematic view of the Hall D photon beam line. 324

217 The effect of collimation on the coherent bremsstrahlung spectrum 325

218 A 3D cutaway view of the GlueX detector and schematic diagram of its major subsystems 327

219 The GlueX Start Counter and Central Tracker. 329

220 The Forward Calorimeter. 332

221 The GlueX Barrel Calorimeter 333

222 Sketch of a upstream photon veto segment 335

223 Particle Identification in GlueX 336

224 The Čerenkov detector 337

225 Block diagram of prototype fadc board. 339

226 Block diagram of prototype tdc board. 340

227 Simulated PWA Results in GlueX 345

228 The results of a double-blind Monte Carlo exercise showing the $J^{PC} = 1^{-+}$ exotic wave 346

229 Polarization in PWA 346

230 Side view of the experimental setup for η and η' two–gamma decay width measurements 348

231 Focal plane detectors for the proposed high energy tagging system 350

232 Background events in the calorimeter projected to the horizontal (dispersive) plane for a photon tagging (photoproduction) run. 351

233 Energy distribution in calorimeter corresponding to the events in Fig. 232 (photon run). 351

234 Monte Carlo simulation of expected yield as a function of angle for $\eta\gamma\gamma$ events on ^4He. 353

235 Coulomb photoproduction of the η' as a function of angle. 354

List of Tables

1 Selected key parameters of the CEBAF 12 GeV Upgrade 34

2 The design characteristics of the MAD spectrometer shown along with HRS performance. 36

3 CLAS^{++}: acceptance and resolution 41

4 CLAS^{++}: operating luminosity 41

5 HMS performance and SHMS specifications 43

6 Summary of the GlueX detector's characteristics. 45

7 Photoproduction cross sections 61

8 Comparison of the figure of merit for large x measurements of the A_1^n structure function at HERA, SLAC, and JLab. 97

9 Leading twist transverse momentum dependent distribution functions 133

10 CLAS^{++} Program Summary - Quark Transverse Momentum and Nucleon Orbital Angular Momentum in Semi-inclusive DIS 138

11 The values of nuclear transparencies for J/ψ propagation 161

12 Parameters for the SLAC E158 experiment from the proposal compared to those for a potential Jefferson Lab experiment at 12 GeV. 188

13 Projected uncertainties for ongoing SLAC E158 (from the proposal) and for a potential Jefferson Lab measurement at 12 GeV. 189

14 Possible sources of systematic uncertainty in the measurement of A_d. 193

15 The design characteristics of the MAD spectrometer shown along with the HRS performance. 209

16 The parameters necessary to evaluate the cryogenic stability by the Steckly criteria for the MAD Magnets 217

17 Properties of the large-acceptance spectrometer magnets. 218

18 Performance estimates for the MAD spectrometer 220

19 The first-order TRANSPORT matrices in natural units (m) for various configurations of the MAD spectrometer 222

20 MAD detector parameters 226

21 Single rates in MAD detector (kHz) with $E_{beam} = 11$ GeV , $I_{beam} = 70$ μA, and a 15 cm long liquid hydrogen target. 227

22 Geometrical specifications for scintillator planes. 229

23 Collection efficiency of photons for each phototube. 231

24 The momentum threshold to produce Čerenkov radiation. 232

25 Equipment needed for the triggering system of the MAD detector package 236

26 Comparison of Pb-Glass, PbF_2, and $PbWO_4$ calorimeter properties. 238

27 Key parameters of Beam Quality - present and with upgrade 239

28 Central Electromagnetic Calorimeter parameters 248

29 Rise time for various PMTs. The existing CLAS detector uses XP2262 PMTs. . . . 264

30 Properties of several scintillators. The existing CLAS detector utilizes BC-408 scintillator. 265

31 HMS Performance and SHMS Specifications 277

32 Q1 comparison between HMS at 1010 A and SHMS at 1291 A. 280

33 SHMS QD30 Magnet Parameters. 285

34 SHMS Optics Parameters for SSA and LSA Tunes 295

35 Sensitive Areas of the Detectors 303

36 Nominal Dimensions of the Hodoscope Elements 308

37 Operating parameters for an experiment using the coherent bremsstrahlung beam. . 341

38 Rates and Processing Requirements 342

39 Estimation of the experimental uncertainties for $\Gamma(\eta \to \gamma\gamma)$ measurement. 354
