

## **LOCK, TAG AND TRY**

- 1. Know the system and its hazards**
- 2. Talk to each other**
- 3. Isolate from energy sources and apply locks and tags**
- 4. Remove stored energy**
- 5. Try to restart - Verify zero energy state**
- 6. Perform work**
- 7. Prepare to re-energize (workmanship!)**
- 8. Talk to each other**
- 9. Remove locks and tags**

# REMEMBER

Multiple energy sources require *written* Lock, Tag and Try procedures

Each exposed worker must apply a lock and tag  
Interlocks, selectors, or on-off switches are *not* energy disconnects

Create an expectation of compliance

Take action *before* exposure
