<http://www.calstatela.edu/2018/college-natural-social-sciences/nss-phys-ttf>

The Physics and Astronomy Department at California State University, Los Angeles is seeking an assistant professor for the tenure track. The links to the advertisement are above. Please let interested applicants know that, although we prefer an applicant with “Experience in developing innovative instructional labs, especially for introductory-level physics courses. “ we will be interested in hearing from applicants who have a serious interest in developing such labs even if they don't have experience.

Applicants should think about their experiences with undergraduate students in such labs.

What sort of difficulties did these students have in the labs?

If the applicant were given the opportunity to address these difficulties what would he/she propose for the labs?

Would the applicant be willing to work with the department's faculty and staff in developing new labs?

Thanks,

Konrad Aniol
Physics & Astronomy,
CSULA
