

SANE experiment update

Mark Jones

Slides from talks by Whit Armstrong
and Oscar Rondon

SANE

Polarized Electron Beam: 4.7, 5.9 GeV

Polarized Proton Target: $\sim \perp, \parallel$

Ammonia (NH_3) Polarized via DNP in 5T Magnetic Field

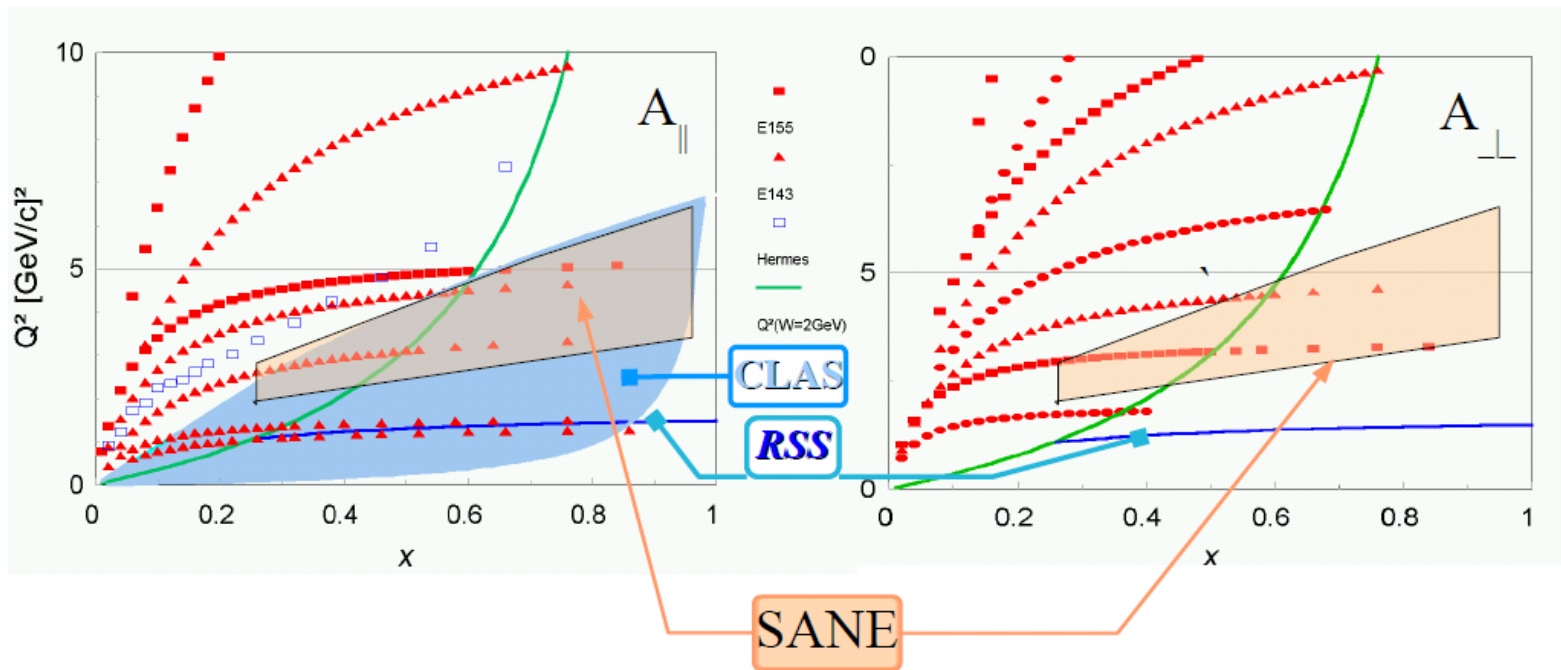

BETA with DIS electron simulation

[1] BigCal Collaboration
 [2] North Carolina A&T U.
 [3] Temple U

[4] Norfolk State U. and U. of Regina
 [5] UVA- JLab

Proton world A_{\parallel} , A_{\perp} data before SANE

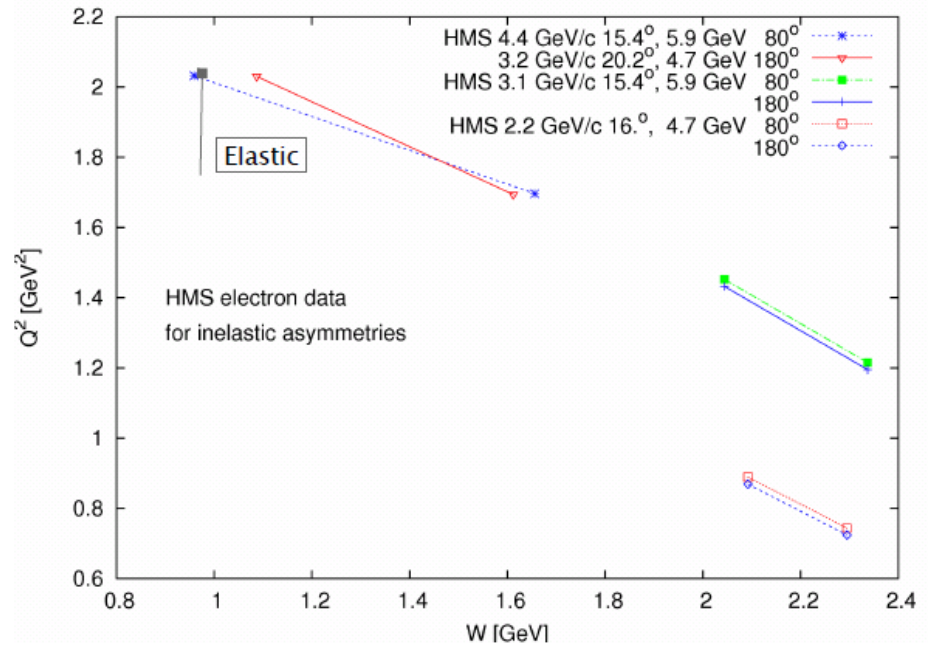

- Two beam energies: 5.9 GeV, 4.7 GeV
- Very good high x coverage with detector at 40°

BETA and HMS data

- $Q^2 - x$ phase space of BETA's 80° data

- Central kinematics of HMS inclusive asymmetry data

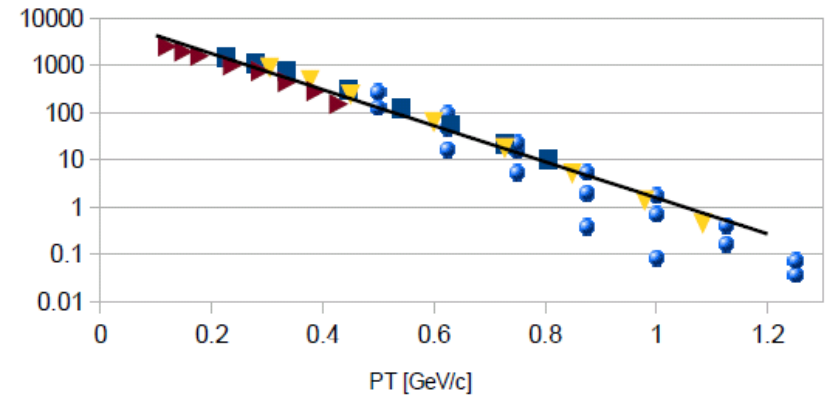

Pair-symmetric background - I

- BigCal detects both charge signs
 - Significant background from e^+e^- from π^0 decays
 - Partial control with cut on $E' \geq 1.3$ GeV; worst dilution $< \sim 0.2$
 - Estimate with GEANT simulation of π^0 production
 - Need inclusive pion photo- and electro-production cross sections
 - Existing D. Wiser parametrization only for H, D targets
 - Parameterized Yerevan pion photoproduction data on C at 4.5 GeV
 - Cross section scales with pion P_T : use simple exponential scaling fit
 - Included fit in J. O'Connell EPC code for single arm hadron photo and electroproduction
 - Compared with DESY electroproduction on C at 5 GeV

Pair-symmetric background - II

K. Alanakian et al., JETP Lett. 32 (1980) 652

— scaling fit $C(g, \pi^-)$ \blacktriangleright π^- 20° \blacktriangledown π^- 60°
 \blacksquare π^- 40° \bullet π^- Wiser x 12

- Fitted π^+ , π^- data at 20°, 40°, 60° to $\sigma(P_T) = a e^{-bP_T}$

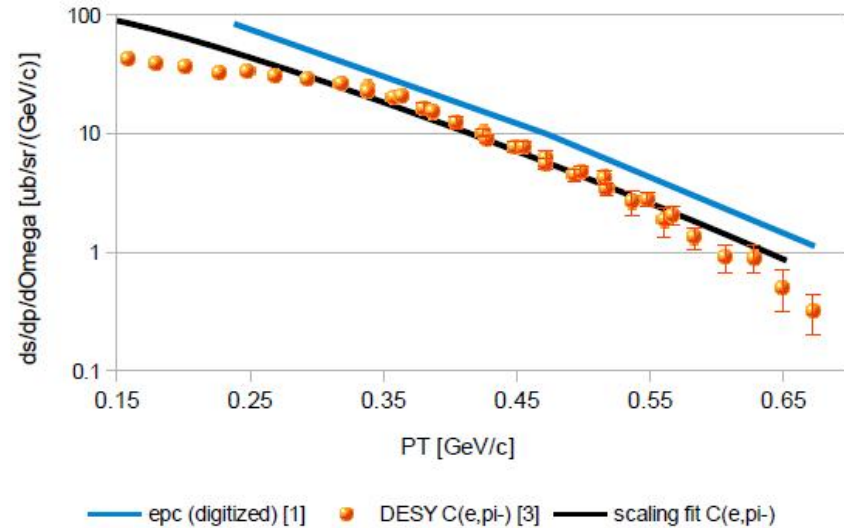

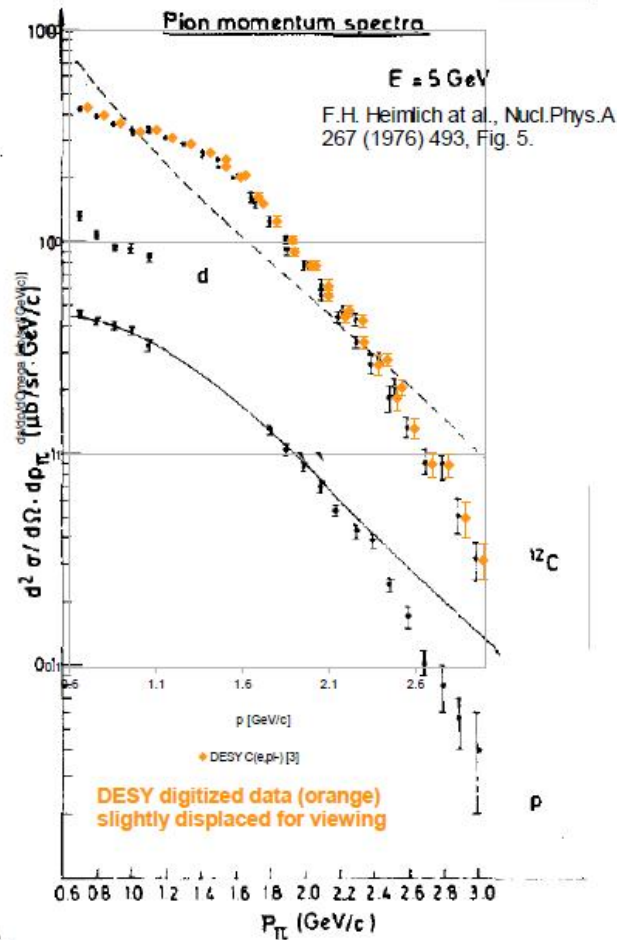

- π^0 fit from average of π^+ and π^-

7/22/14

- Wiser π^- data on H scaled times 12, along with data on C and scaling fit (only to C)

12

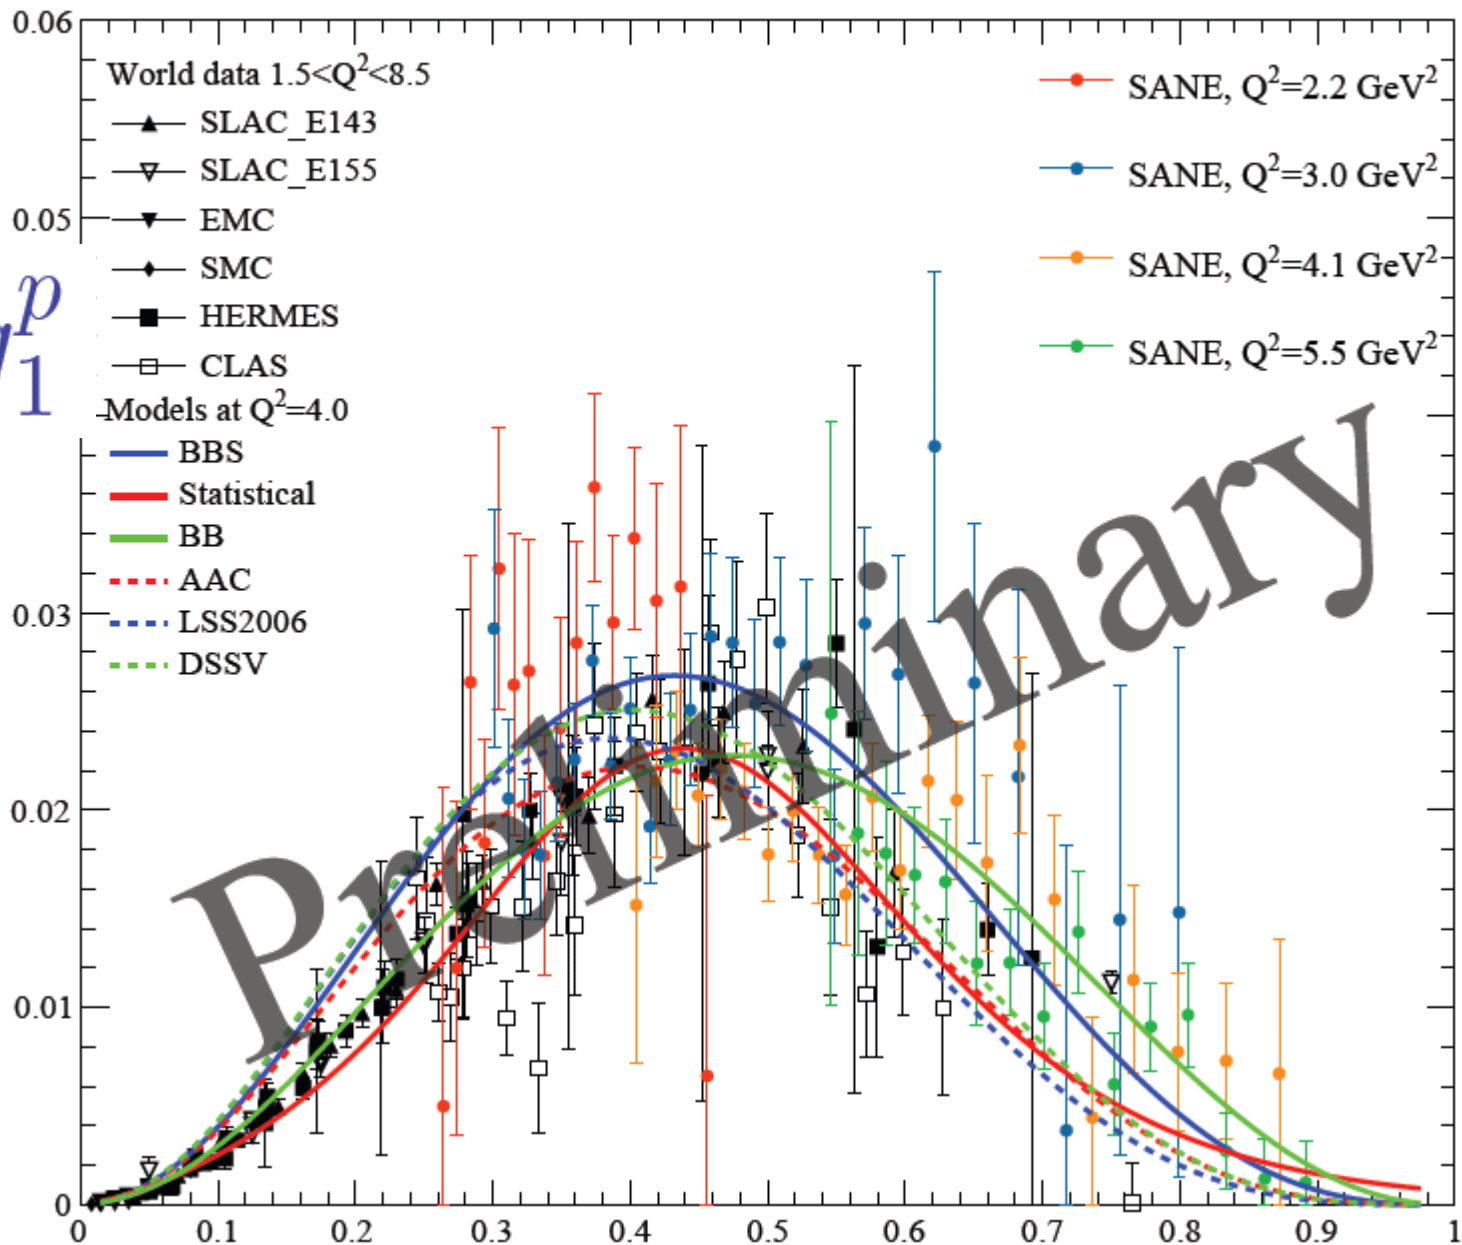

Pair-symmetric background - III

- Test of scaling fit with DESY C(e, π^-) data at 5 GeV, 13°

[1] J. O'Connell CEBAF Summer Workshop, F. Gross and J. Lightbody, News, 1988, p. 345

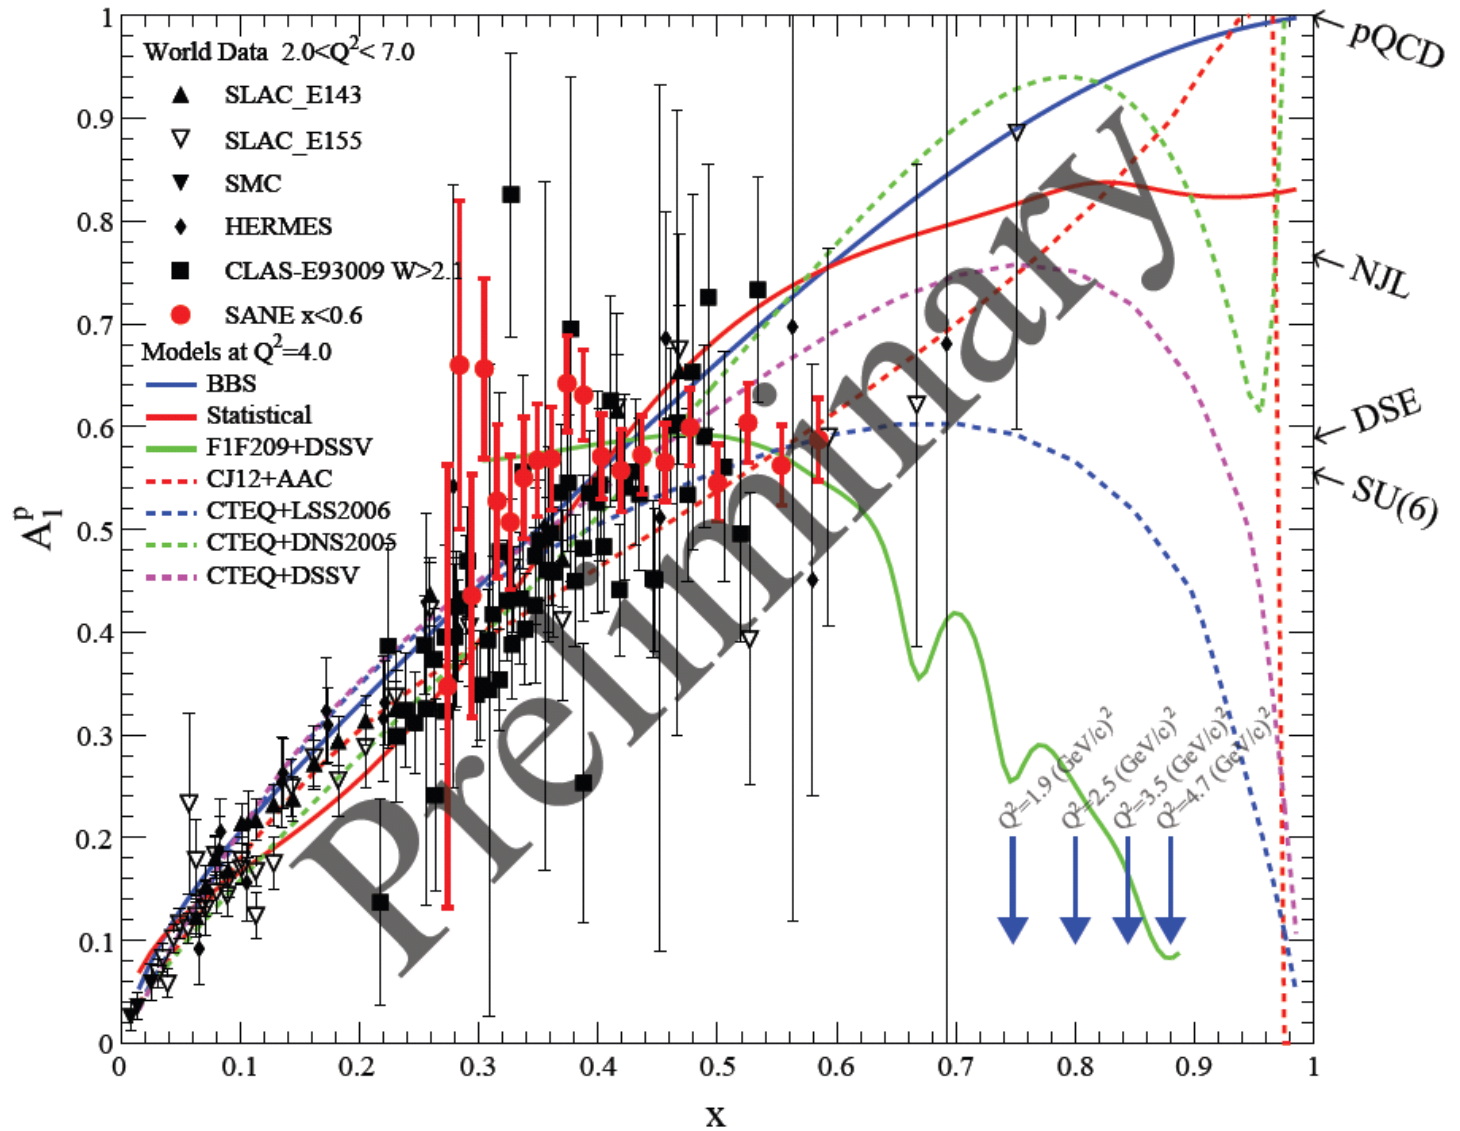

$x^2 g_1^p$

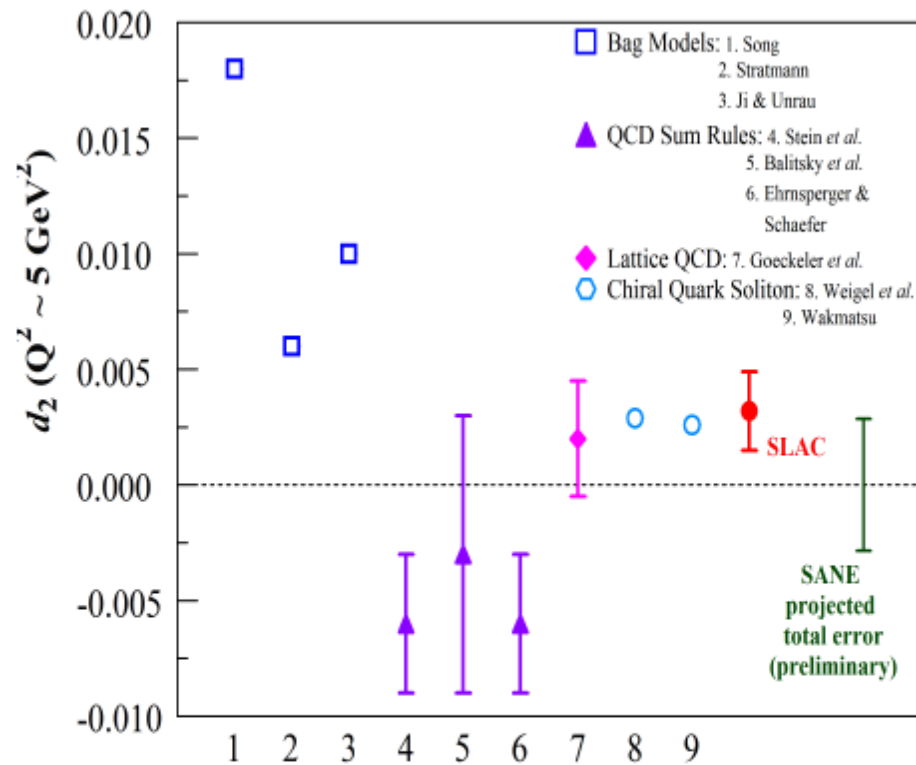

$x^2 g_2^p$

Models are showing g_2^{WW} .

A_1^P 

Projected error bar on d_2

SANE's measured C-N d_2
(all data $E' > 1.3$ GeV, $W > 2$ GeV.
Only projected error shown.)

Future work

- Finalize π^0 background estimate
- Finish recalibration of BigCal energy calibration using both π^0 and η decays.
- Expect to be finished by end of 2014.
