

FEBRUARY 12, 2018

Ilya, Ashot and Jose

- * Jose: provide formulas for the differential cross section $\gamma \gamma \rightarrow \pi^0$
- * Jose: check for the existing data and how much one needs to improve to have a case for an experiment
- * See how this proposal can be connected to the approved experiment for the charged pion
- * Jose: start thinking about the physical and theory justification for the experiment
- * Effects of meson exchange must be studied
