

Michaels, Robert has a B.S. summa cum laude from Texas A&M University and attended graduate school at Yale University, obtaining a Ph.D. in 1989 with a thesis on a Standard Model test using parity-violating electron scattering from ^{12}C . He did postdoctoral research at the Max Planck Institute for Nuclear Physics in Heidelberg working on a Hyperon Beam Experiment at CERN that searched for new states of matter. Robert came to Jefferson Lab as a Staff Scientist in 1993. He has participated in the development and commissioning of Hall A, and has expertise on data acquisition systems, beam polarimetry, magnetic spectrometers, particle detectors, software, and data analysis. Robert is currently a Senior Staff Scientist. He has been a central figure on Jefferson Lab's parity-violation program which probes Fundamental Symmetries, nuclear structure (neutron distributions), and the strangeness content of nucleons. Robert is a co-spokesperson on five parity-violation experiments and has participated in several others, including E158 at SLAC. Robert is one of the Control Account Managers for the MOLLER project in Hall A. He mentors graduate students and postdocs, coordinates collaborators, and proposes new experiments. Since 2007 he has been an Adjunct Professor at Old Dominion University. He has authored over 150 papers published in refereed journals.
