The new "Italian" sector 6 Cerenkov chamber was aligned on the Hall B floor to a set of coordinates supplied by INFN (ref. B1034). The tubes along the top edges were located by forming 5 circles on the beam left and right sides (ref. B1035). These tubes will be the closest object to the permanently installed Region 3, sector 6 chamber. The Cerenkov was then installed in the forward carriage, and located relative to the forward carriage fiducials. During the location survey for the cerenkov, the beam left/right edge of the region 3, sector 6 detector was located by 3 points. The forward carriage data was then transformed into the originally found location (ref survey January $3^{\text {rd }} 2006$ ). The interpreted results of this transformation show that if the carriage is moved to its previous installed location, there will be approximately 4 to 5 centimeters clearance between the region 3 sector 6 and the new Cerenkov. All the coordinates below are in the Clas coordinate system.

Locations for interpolated surface tangent points on the Cerenkov are as follows :

| Point | $x(\mathrm{~mm})$ | $y(\mathrm{~mm})$ | $z(\mathrm{~mm})$ |
| :--- | ---: | ---: | ---: |
| Beam Left |  |  |  |
| BL1 | 1007.1 | -653.4 | 3960.7 |

The "Italian" coordinates when transformed to the installed position have the following values. Also shown are the deltas showing the coordinates supplied from INFN, minus the theoretical installed position.
