The Hall B solenoid and target were surveyed with the cart assembly in the DVCS E1 experiment position on the $13^{\text {th }}$ of November, 2008. The location of the calorimeter was calculated based upon the November $4^{\text {th }}, 2008$ alignment to the solenoid survey.

The results below are the difference from the components ideal location. $A+Z$ is downstream from ideal, $+X$ is beam left from ideal, and $+Y$ is above. $Z^{*}$ refers the distance from CLAS center with a negative upstream. A +pitch is counter clockwise looking from the beam right, a +yaw is counter clockwise from above, and a +roll is clockwise looking from upstream. $Z, X$ and $Y$ Values are in millimeters. Angle data is in decimal degrees.
