## DETAILS:

Below are the results from the inspection of the Hall B torus coil lifting fixtures 3, and 4. For each frame, a right-handed coordinate system was established centered on the bisected plane between planes formed by the top and bottom holes (using points $\mathrm{BH} 1, \mathrm{BH} 2, \mathrm{BH} 3$, and BH 4 respectively). The bisected planes formed the Y plane. The rotation about the vertical axis was set using an average line between the top and bottom holes BH 1 . For Frame 3, a Z axis was established using the mid-point of the BH 1 top bottom line and the mid-point of the BH2 top to bottom line. For Frame 4, a Z axis was established using the mid-point of the BH3 top bottom line and the mid-point of the BH4 top to bottom line.
Values are in inches. Point names are labeled on the frame for reference.
