Coils B and C were checked in Hall B on April $14^{\text {th }}$, and $15^{\text {th }}$. Additional data was picked up on the blocks surrounding the Torus hub.

Coil C was installed approximately horizontal (270o clockwise looking downstream) and Coil $B$ was at $210^{\circ}$. The two survey ball holes on the outer edge away from the hub were used to determine the angles formed between the coils. The data below marked 'US' and 'DS' are the upstream and downstream prisms.

The ideal coordinates based on drawing B00000-04-01-1101 rev D and the found locations (note offset $5 / 16$ " due to the survey prism used) are:

The found 4 block top corners are attached to this document.
Additional information regarding the plane fit of the coil case is also attached.
The plane information for the OOPS on the front face is also included.
