## DETAILS:

Coils B, C and D were checked in Hall B on April $27^{\text {th }}$.
Coil D was installed approximately horizontal ( $270^{\circ}$ clockwise looking downstream), coil C was at $210^{\circ}$ and coil B was at $150^{\circ}$. The two survey ball holes on the outer edge away from the hub were used to determine the angles formed between the coils. The data below marked 'US' and 'DS' are the upstream and downstream prisms.

The ideal coordinates based on drawing B00000-04-01-1101 rev D and the found locations (note offset $5 / 16$ " due to the survey prism used) are:
