## DETAILS:

Below are the results of the recent Region 4 Support Tube inspection. The coordinate system was established using the bottom flange to define the XY plane. Roll was controlled by a line through holes $3 \& 6$ on the top flange and the origin was defined by the ID of the top flange. It should be noted that the threaded bolt holes for "BC's 13.5 and 17.125 " were located by placing a sphere in the hole and projecting down to their respective planes. Values are in inches and degrees.
