## DETAILS:

The Pair Spectrometer and downstream Frascatti magnets were surveyed April $24^{\text {th }}, 2019$. Additionally the 2 rails upstream were located.

The ideal and found coordinates are shown in meters relative to the CEBAF coordinate system. The beam following coordinates (millimeters) are also shown and are described as follows: Positive $x$ is to the beam left from ideal beam looking downstream; Positive $y$ is the amount lower than beamline; negative $z$ is amount upstream from the ideal position.

The angular displacements are shown in degrees. Positive yaw is the counter clockwise rotation about the Y axis; negative pitch is the clockwise rotation about the X axis (physics standard); positive roll is the clockwise rotation about the Z axis.

Note that the Pair Spectrometer (MPS2H01) is offset by 88.6 mm beam left from the straight ahead beamline.

The two I-Beam rails upstream of the pair spectrometer were measured. A plane was formed from points taken on the rails. The coordinates are in meters from the upstream Frascotti magnet. $X$ and $y$ are from beamline, negative $z$ from the Frascotti center.
