The Hall B Target, IPM2H01 and IPH2H00 were surveyed on November $11^{\text {th }}$, and $14^{\text {th }}$, 2019. The results are below. The table shows the ideal coordinates in the CEBAF system (meters), the beam following system (BFS) in millimeters, beam following angular deltas and the As-found location in the Cebaf system.

The BFS data shows the as-found position as it follows the beam relative to the ideal position. In the BFS, a positive dx value is to the beam left looking downstream along beam from the ideal; a positive dy is higher vertically from ideal; A positive dz is downstream from ideal. The delta angle are shown in degrees and are the differences (found - ideal) from ideal.
