## DETAILS:

Below are the results of the Hall B G8b beam line survey performed during the week of June 13, 2005. The $X$ and $Y$ values are relative to the ideal beam center line(in millimeters), with $a+X$ to the beam left, and $a+Y$ up. The $Z$ values are based on drawing \# 66840-04323. A +Z value is downstream. Note that the collimator was not set precisely for X position. It was only set to be parallel with beam.
