

# ***Jefferson Lab Alignment Group***

## **DATA TRANSMITTAL**

**TO:** Steve Lassiter

**DATE:** 11 Apr 2000

**FROM:** Jim Dahlberg

**Checked:** # : 592

**DETAILS:**

Attached are the results of the QC survey performed on the light guide assembly #4R. It should be noted that the light guide was supported in a relaxed state on datum A (see drawing #67223-E-56098-00), using parallel bars to shim up against the mylar, thus avoiding the taped areas. There was a slight curve, which was visible underneath.
