FROM: Jim Dahlberg

Checked: # : 594

DETAILS:

Attached are the results of the QC survey performed on the light guide assembly #4L. It should be noted that the light guide was supported in a relaxed state on datum A (see drawing #67223-E-56098-00), using parallel bars to shim up against the mylar. The parallel bars enabled us to avoid the taped areas, which obstruct the light guide. In this relaxed state, there was a slight curve on the bottom side. The labels on the attached sheet correspond to the point ID's on the drawing referred to above.
