Data: step2A\HALLD\Tagger\130412A

The Hall D Tagger magnet vacuum pipe was aligned April 11th, 2013. The table below shows the coordinates of ideal coordinates for various components and their asfound locations.

The first table shows the flange center results. The last columns in this table show the delta x/y's in millimeters in a beam following system. A +x means the found position is to the beam left and a positive y indicates the found position to be high from the ideal. Note that the position to the downstream dump flange is based on an ideal line from the exit beam of the tagger to the dump (as per optim beam line data).

The second table shows the results of the found location for the 2 coordinates given on a sketch supplied by Hall D staff. Similarly the last columns show the deltas but include z values. A positive Z indicates the found position is downstream of the ideal.

The third table fit the found tooling balls targets to an ideal location and additionally the rotation values for the targets. A positive yaw indicates a counter clockwise rotation about the y axis, a positive pitch indicates a clockwise rotation about the x axis and a positive roll indicates a clockwise rotation about the z axis. Angles are in degrees.

Flange Center Results										
	fnd z (m)	fnd x (m)	fnd y (m)	Ideal z (m)	Ideal x (m)	Ideal y (m)	z(bfs) mm	x(bfs) mm	y(bfs) mm	
us flange	302.1162	80.5980	104.7015		80.6000	104.7000		-2.02	1.54	
ds dump flange	312.3494	78.9071	104.6809		n/a	n/a		-41.49	-19.08	
ds photon flange	309.0342	80.6008	104.6995		80.6000	104.7000		0.81	-0.50	

Position based on values in sketch										
				z(ideal)m	x(ideal(m)	y(ideal)m	z bfs	x bfs	y bfs	
us_pol	302.2918	80.4701	104.6730	302.2919	80.4701	104.6730	-0.08	-0.01	0.07	
ds_pol	308.4401	79.7698	104.6733	308.4400	79.7696	104.6729	0.13	0.24	0.36	

Ideal location						
	z(bfs) mm	x(bfs) mm	y(bfs) mm	dYaw °	dPitch°	dRoll°
center	-0.02	0.06	0.21	0.00229	0.006303	0.008913

The fourth table shows the beam left and right, upper and lower vacuum chamber results. The beam left side measurements were taken to the outside surface of the chamber and the beam right side measurements were taken to the inside surface of the chamber. A positive y indicates the found position to be high from the ideal.

The final table shows the results for the outer beam right surface of the vacuum chamber. Again, the values are in machine coordinates.

Beam Right Outer Surface of Vac Chamber				
	find z (m)	find x (m)	find y (m)
