Below are the as found position of Hall D components measured in August, 2022. The found coordinates are in the CEBAF coordinate system. The Beam Following coordinates represent the amount offset from the design (ideal) location. The results are relative to a beam-following coordinate system; +X is left of beam, +Y is above beam, +Z is downstream. Angles are reported using the right-hand rule; +Pitch is a counter-clockwise rotation looking from left, +Yaw is a counter-clockwise rotation looking from above, +Roll is a counter-clock rotation looking from downstream.

For the Lead absorber aperture (Pb) component the beam following coordinates are post summer 2022 run and are relative to the ARWEN frame. The CEBAF coordinates are approximately determined.

Component	CEBAF Coord. System			Beam Following Coord. System		
	X[m]	Y[m]	Z[m]	ΔX[mm]	ΔY[mm]	ΔZ[mm]
Pb	80.6007	104.7023	406.0274	0.24	1.92	-227.75

Part of the August surveys were the COMPCAL positions. For the component names please see the figure bellow. The CompCal coordinates were determined as an average of the 4 repetitions.
