DETAILS:

data: aalign\electron&sh\2012\052912a & aalign\hadron\2012\053012a

The left and right spectrometers were positioned approximately at +/- 12.5 degrees in 2012. The data from these 2 pointing surveys were used to determine the center of quads 1 for both spectrometers. Based on these surveys the following distances to the ideal targets were determined:

Spectrometer	Date	Angle (deg)	Distance (mm)
Right	2012.05.29	-12.498	2070.04
Left	2012.05.11	12.523	2068.95
