DETAILS:

data : aalign\electron&sh\2016\E122216a

Below are the results from the survey of the left spectrometer on December 22nd, 2016. The horizontal pointing value shows how much the central axis of the spectrometer misses the ideal target. This value is perpendicular to the spectrometer axis, not along the beam line. For the vertical pointing, a positive value indicates that the spectrometer is pointing above the target.

A graphical sketch is shown at the end of this transmittal.

===== RESULTS ===== E122216A

The central ray of the spectrometer is at -24.571 degrees
The central ray is missing the defined target center by -0.50 [mm] Upstream
and -0.82 mm vertically [positive value is up]

If the offset is corrected by secondary alignment, the spectrometer will be at -24.575 degrees

To achieve this optimal setting
make the following adjustments:
spectrometer will be at -24.575 degrees
Horizontal corrections:
Move rear jacks along tangent -0.51 mm Upstream

9 Par Aposter Val : 0.16 (mm)
No 3DD output file available to report std. dev

E122216A

- Beam-Spec Intercept Point
- Beam-Spec Perpendicular Point
- Spectrometer Projected Target Point
- ✕ Straight-Ahead Target Point [ideal]

angles: delta : 24.57141 [degrees]
beam : 142.49998 [degrees]
spectrometer: 167.07139 [degrees]

perpendicular distance : 0.497 [mm]
target - intersect dis : 1.196 [mm]
found target - intersect dis : 2.585 [mm]
Spectrometer is -0.82 lower than ideal target [mm]

- Spectrometer Line
- Straight-Ahead Beam
- Perpendicular line
