## Data Transmittal

**TO:** Arun Saha, John LeRose

**DATE:** Sep 20 2004

**FROM:** Chris Curtis

**Checked:**

**# :** A954

**DETAILS:**

Below are the results from the electron (left) spectrometer survey carried out on 10<sup>th</sup> August; and the superharp/BCM survey carried out on the 9<sup>th</sup> September, 2004. The values represent the difference in millimeters from the ideal position of each fiducial. A positive X value is to the beam left, a positive Y is too high.

===== RESULTS ===== E081004A

The central ray of the spectrometer is at -19.991 degrees.  
It is missing the defined target center by 2.13 mm upstream,  
and 0.92 mm vertically (positive = up).

If the offset is corrected by secondary alignment, the spectrometer will be at -20.005 degrees.

\*.9PR : 0.109

\*.3DD : 0.92
