

Young-Kee Kim, an experimental particle physicist, is the Louis Block Professor of Physics at the University of Chicago. She has devoted much of her research work to understanding the origin of mass for fundamental particles by studying the two most massive particles (the W boson and the top quark), and the Higgs particle that gives mass to elementary particles. Between 2004 and 2006, she was the spokesperson of the CDF experiment at Fermilab's Tevatron, a collaboration with more than 600 physicists from around the world. Between 2006 and 2013, she was Deputy Director of Fermi National Accelerator Laboratory (Fermilab). She is currently working on the ATLAS experiment at the LHC at CERN. She devotes some of her time in educating the next generation of accelerator physicists. She has served on numerous national and international advisory committees, councils and boards.

Kim was born in South Korea, and earned her BS and MS in Physics from Korea University, in 1984 and 1986, respectively, and her Ph.D. in Physics from the University of Rochester in 1990. Her postdoctoral research was done at Lawrence Berkeley National Laboratory. She was an assistant, associate and full professor of physics at University of California, Berkeley. In 2003, she moved to the University of Chicago.

Her honors include the Ho-Am Prize, a Sloan Fellow, a Fellow of the American Physical Society, a Fellow of American Association for the Advancement of Science, South Korea's Science and Education Service Medal, the University of Rochester's Distinguished Scholar Medal, and Korea University's Alumni Award.
