Sailing...

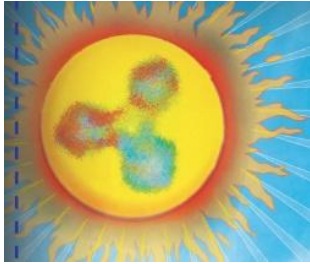

Lattice Sea...

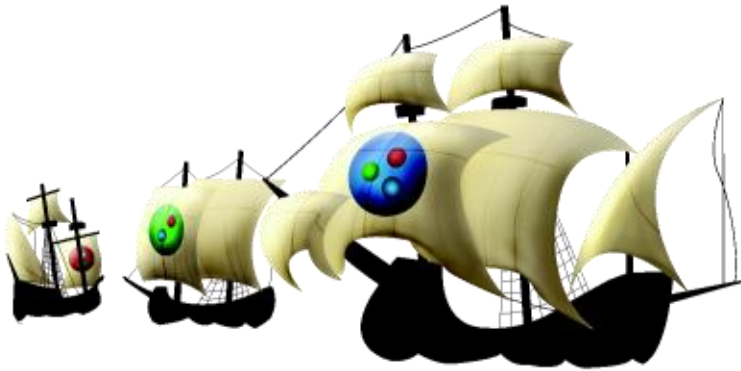

Sailing on Lattice “Dynamical” Sea...

Poster

The sun represent the hot weather of a typical summer day in Virginia. It of course also reminds us of (W)hotQCD physics.

Three boats represent the first three that came to Jamestown 400 years ago: An era of discovery, which is where we stand today as we move on to lighter and lighter pion masses.

They also represent the “historical triangle” of this area:

Willamsburg, Yorktown, Jamestown.

Physics wise, they can represent the many choices of fermion action used in the community. “Three” means “many” in Chinese philosophy.

People who work on Algorithms and Machines are the engineers making us move forward at a faster paste.

Poster

Dynamical sea: with fermion and gluon loops. Perfect for study in Vacuum Structure and Confinement.

Dashed boundary: not a chopping marker. It represents the finite volume with the boundaries of our choice.

Lattice sky: the sky is unlimited for our future development; looking forward to Applications beyond QCD
