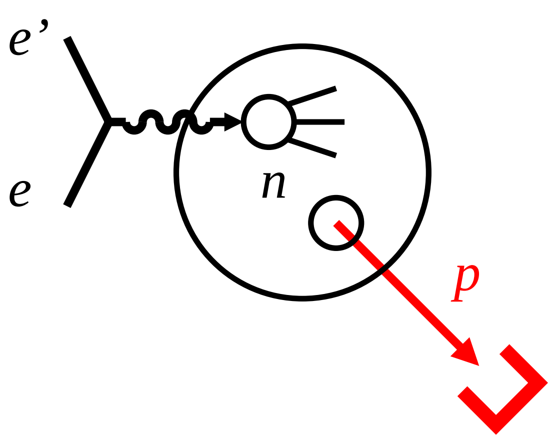
  incl. light-front WF for high-energy procs

  Neutron spin–polarized

  Intrinsic Δ isobars suppressed by Isospin $= 0$
  $|\text{deuteron}\rangle = |pn\rangle + \epsilon|\Delta\Delta\rangle$



[Nucleus rest frame view]

- Spectator nucleon tagging

  Identifies active nucleon

  Controls configuration through recoil momentum:
  Spatial size, S $\leftrightarrow$ D wave

  Tagging in fixed-target experiments
  CLAS6/12 BONUS, recoil momenta $p =$ 70-150 MeV

Light ions: Deuteron, spectator tagging

  Potentially full acceptance, good resolution

  Can be used with polarized deuteron

  Forward neutron detection possible

- Unique physics potential
