The Assignment for the Shutdown

Evaluate all ATLis tasks in the following manner BEFORE doing any of them

Note: This process is more than what is required by the EH&S manual!

```
                    Start
                      │
                      ▼
        ┌─────────────────────────────┐
        │ Perform task hazard analysis │
        └─────────────────────────────┘
                      │
                      ▼
              Is the task Risk          ──Yes──▶  Follow normal work
              Code 3 or above?                    hazard analysis
                      │                           procedures to mitigate
                     No                           hazards
                      │
                      ▼
              Does the task
              involve handling          ──Yes──▶  Utilize guidance provided
              sharp objects &                     by B. May to evaluate
              tools?                              handling sharp objects
                      │                           and manual lifting.
                     No
                      │
                      ▼
              Does the task
              involve manual            ──Yes──▶  Document results of
              lifting?                            hazard analysis in the
                      │                           comments section of ATLis
                     No
                      │
                      ▼                           Proceed with work
        Proceed with normal work                  execution according to
        procedures reviewing relevant             plan, reevaluating if plan
        SOPs, TOSPs, etc.                         changes
                      │                                   │
                      ▼                                   │
                     End ◀─────────────────────────────────
