

PrimEx analysis status:

- Pedestals and their sigma's tables were created for each run
- Pi0 and snake scan gain tables were created for certain groups of production and snake runs (tables have to be revisited after the algorithm fine tuning)
- Skim files for pi0 events and ped, lms, epics and ps trigger events were created for each run (no ps events in empty target though)
- Tagger calibration tables were created (the tables need fine tuning)
- New HyCal acceptance/resolution simulation is on the way
