- 1. Thermal readback LabVIEW program test station
 - A softIOC was created on a Hall B Linux computer to test the EPICS portion of the thermal readback LabVIEW program
 - The softIOC works (able to send information to and receive information from EPICS PVs), but there is a continuous "connection refused" CA (Channel Access) beacon error that may be caused by trying to communicate with multiple IP addresses
 - A solution may be to change the environment variables for the cRIO so that it only communicates with the IP address for the test computer
