

Workers Safety Committee

The Jefferson Lab Worker Safety Committee (WSC) is empowered to promote and continuously improve work place safety at Jefferson Lab. It serves as a vital feedback link to highlight work force safety issues and concerns to upper level management including the Laboratory Director. Members actively engage employees regarding areas for improvement, and overall perception of Lab safety. All employees have direct access to committee members and are encouraged to present any issues they feel are pertinent to safety at the Lab. The Chair of the Committee is also a member of the Director's Safety Council (DSC).
