

Nuclear Physics on the Hill 2016

- Jlab, RHIC and FRIB user groups meet with the offices of senators and representatives
- 4th year of Jlab involvement
- 24 participants from 12 states

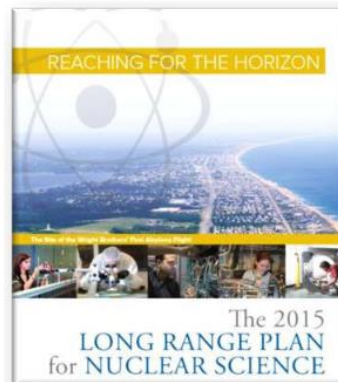

JSA travel support

Awarded: \$7K

Remaining: \$1.6K

Current year: will request \$8500

"The progress achieved under the guidance of the 2007 Long Range Plan has reinforced U.S. world leadership in nuclear science. The highest priority in this 2015 Plan is to capitalize on the investments made."

The first priority listed under this recommendation relates to realizing the scientific potential of Jefferson Lab's Continuous Electron Beam Accelerator Facility (CEBAF):

"With the imminent completion of the CEBAF 12-GeV Upgrade, its forefront program of using electrons to unfold the quark and gluon structure of hadrons and nuclei and to probe the Standard Model must be realized."
